Rethinking Development Ronaldo Munck, 2021-05-17 Development and underdevelopment are the main determinants of life chances worldwide arguably more so than social class Marxism as the underlying theory for social revolution needs to have a clear understanding of the dynamics of development and social progress Exploring the intersection of Marxism and development this book looks at Marx s original conception of capitalist development and his later engagement with under developed

Russia The author also reviews Lenin s early critique of the Russian populists rejection of capitalism compared with his later analysis of imperialism as a brake on development in the non European world The book then considers Rosa Luxemburg who arguably provides a bridge between these theorists and those that follow with her analysis of imperialism as a necessity for capitalism to incorporate non capitalist lands Turning then to the non European world the author examines the Latin American dependency theories the post development school and the recent indigenous development theories advanced by Andean Marxism Finally Munck addresses the relationship between globalization and development Does this relationship suggest that it has not been capitalism but a lack of capitalism that has led to under development Translations on

Development in the 21st Century Alberto Gabriele,Elias Jabbour,2022-03-02 Over a hundred years after the first socialist revolution broke the global monopoly of capitalism a new class of socialist oriented socioeconomic development is coming to the fore Capitalism is still dominant worldwide although its hegemony is no longer undisputed and humankind is now faced with a key existential challenge This book proposes an alternative path to overcoming the worldwide crisis of globalized capitalism It offers a novel balanced and historically rooted interpretation of the successes and failures of socialist economic construction throughout the last century The authors apply a multidisciplinary holistic and purpose based methodology to draw basic lessons from stylized facts emerging in different areas of knowledge ranging from political economy to biology and from key national socioeconomic experiences with a particular focus on China The book is divided into three parts The

first is mainly theoretical and general in nature identifying the major contributions bequeathed by the hard sciences to their social counterparts Consistent with these findings the authors offer a stylized interpretation of the contemporary state of the art of the debate on the core concepts of economic science and advance a few elementary theories about what socialism in the 21st century could look like The second and third parts analyze and discusses the core features of a few select experiences which have evolved in certain countries since 1917 some of which are still unfolding The book will find an audience among academics researchers and students in the fields of economics political science history and geography as well as policy makers particularly in developing countries

Elusive Development Marshall Wolfe,1996 This deeply thoughtful book explores some of the very difficult questions thrown up by the development process Marshall Wolfe reviews what has been said and done in the name of development over four decades He sees development as a Sisyphean task of trying to impose value oriented rationality on realities that remain permanently recalcitrant to such reality precisely because its key actors be they the state social groups development agencies individual experts or the market cannot be assumed to be either benevolent or consistently rational

Of States and Cities Peter Marcuse,Ronald van Kempen,2002 The nature and effects of globalization are coming under critical scrutiny across all continents This book focuses on one aspect the globalization of cities It examines the claim that the state is powerless to influence events and that history geography and culture have become irrelevant in the worldwide trend towards a uniform urban model a model which features increased segregation decline of the central city and social polarization The international team of contributors is well placed to put these claims in perspective Drawing on their experiences of cities as diverse as New York and Warsaw Istanbul and Sao Paulo they demonstrate that states and cities have adopted widely varying approaches to the advent of globalization and that its impact has been constrained by each city s history physical layout location environment role in the international economy and demographic composition The diversity of urban development and political response revealed is enormous and provides ample practical examples of what might be

done to bring about improvements for the increasing number of people who live in cities
