

KANTIAN PHILOSOPHY AND SOCIOLOGICAL METHODOLOGY

SUSAN STEDMAN JONES

This article concerns the Kantian influence on the development of sociological methodologies. This influence has been to develop two distinct, but opposing views on the appropriate mode of social explanation. It will be argued that the animosity between the rival schools of methodology, that is between those who would be characterized as 'positivist', and those who drawing on phenomenology and existentialism, would reject the claim that sociology is a science, can be in part explained as a difference in values. This difference in values centres around a difference in conceptions of the nature of man.

To develop this argument it is necessary to discuss briefly a number of related issues. Firstly it will be argued that not only social theories, but also social methodologies are bound up with the question of the nature of man, and that therefore methodologies have not just conceptual, but moral implications. A second issue is of the relationship between sociological method and philosophy. It will be argued that sociological methods trade off or are developed out of philosophies: what is seen as methodologically viable is determined by philosophical achievements. Both are expressions of man's self knowledge and self awareness. The development of a descriptive/empirical subject concerned with the nature of social life historically developed later than an abstract subject concerned with the nature of meaning and knowledge, but both can be seen as expressions of man's self knowledge. No claims will be made for the social/economic/historical nature of philosophical achievements – the concern is solely with the logic of certain concepts that run through sociological methods, and their philosophical origin. It will be claimed that it was the philosophical achievement of Kant that paved the way for the development of a distinctive sociological method. The main aim of the paper is to trace a line of development in sociological method that can be traced back to its philosophical forebear. This line of development, originally Janus-faced, reflecting the twin concerns of Kantian philosophy, morality and science, has now split into opposing camps upholding distinct and mutually exclusive conceptions of man.

It has been recognized that theoretical disputes about the nature of social action are in part disputes over the nature of man. That is, it is impossible to say what kind of action social action is without making certain assumptions about the nature of the actor himself. It has not, however, been so explicitly recognized that methodological disputes, about the appropriate method of explaining social action, are also bound up with the question of the nature of man. What sort of being man is, is an issue intrinsically tied to the question of how we explain his action. Are law-like statements based on behavioural variables the right way to achieve understanding, or should the subjectivity of consciousness be the basis of all accounts of social action? To achieve at least adequate, if not exhaustive understanding, one must assume that the chosen method will reveal the nature of the subject under discussion. One cannot imagine the nature of coal being fully revealed by subjective analysis, nor can one put a motive under a microscope. Thus the chosen method reveals something of what is thought to be the nature of the subject. For example, if it is argued that the empirical approach is an adequate analysis of social action, then the implication is that man is essentially a member of the world of sense, complicated and intricate, but amenable,

Sociological Methodology 1980 Karl F. Schuessler, 1979 **Sociological Methodology, 1980** Karl F. Schuessler, 1979 **Social Dynamics Models and Methods** Nancy Brandon Tuma, 1984-08-28 Social Dynamics Models and Methods focuses on sociological methodology and on the practice of sociological research This book is organized into three parts encompassing 16 chapters that deal with the basic principles of social dynamics The first part of this book considers the development of models and methods for causal analysis of the actual time paths of change in attributes of individual and social systems This part also discusses the applications in which the use of dynamic models and methods seems to have enhanced the capacity to formulate and test sociological arguments These models and methods are useful for answering questions about the detailed structure of social change processes The second part explores the formulation of the continuous time models of change in both quantitative and qualitative outcomes and the development of suitable methods for estimating these models from the kinds of data commonly available to sociologists The third part describes a stochastic framework for analyzing both qualitative and quantitative outcome of social changes This part also discusses the sociologists perspective on the empirical study of social change processes This text will be of great value to sociologists and sociological researchers **Sociological Methodology, Volume 39, 2009** Yu Xie, 2009-10-27 The 2009 volume of Sociological Methodology continues a 41 year tradition of providing cutting edge methodology for sociological research Under the editorship of Yu Xie three features are prominent in this volume Appropriate and practical methodological tools for substantive research Interdisciplinary dialogues on methodological issues between sociologists and non sociologists Dedication to publishing purely methodological work in sociology **The 5-year Outlook on Science and Technology, 1981**, 1981 **Comparative Sociological Research in the 1960s and 1970s** Armer, Marsh, 2022-03-28 **Sociological Methods & Research**, 1987 **Measurement, Design, and Analysis** Elazar J. Pedhazur, Liora Pedhazur Schmelkin, 2013-04-15 In textbooks and courses in statistics substantive and measurement issues are rarely if at all considered Similarly textbooks and courses in measurement virtually ignore design and analytic questions and research design textbooks and courses pay little attention to analytic and measurement issues This fragmentary approach fosters a lack of appreciation of the interrelations and interdependencies among the various aspects of the research endeavor Pedhazur and Schmelkin s goal is to help readers become proficient in these aspects of research and their interrelationships and to use that information in a more integrated manner The authors offer extensive commentaries on inputs and outputs of computer programs in the context of the topics presented Both the organization of the book and the style of presentation allow for much flexibility in choice sequence and degree of sophistication with which topics are dealt **Handbook of Survey Research** Peter V. Leicht,2003-12-03 Volume 20 of Research in Social Stratification and Mobility continues to remain at the forefront of the diverse group of social scientists who study social inequality and is now the official publication of the Social Stratification Research Group of the International Sociological Association RC 28 This issue features a comprehensive retrospective on the 40 years of contributions to social stratification research made by the late William Sewell and the Wisconsin Longitudinal Survey including an all inclusive bibliography of publications Other contributions address the growing differences between workers with full time jobs and various categories of the underemployed in Israel the United States and Germany social mobility in Korea and Sweden subjective responses to social inequality and the social consequences of status inconsistency and analyses of class consciousness and growing wealth inequality in the OECD *Marginal Models* Wicher

Bergsma,Marcel A. Croon,Jacques A. Hagenaars,2009-04-03 Marginal Models for Dependent Clustered and Longitudinal Categorical Data provides a comprehensive overview of the basic principles of marginal modeling and offers a wide range of possible applications Marginal models are often the best choice for answering important research questions when dependent observations are involved as the many real world examples in this book show In the social behavioral educational economic and biomedical sciences data are often collected in ways that introduce dependencies in the observations to be compared For example the same respondents are interviewed at several occasions several members of networks or groups are interviewed within the same survey or within families both children and parents are investigated Statistical methods that take the dependencies in the data into account must then be used e g when observations at time one and time two are compared in longitudinal studies At present researchers almost automatically turn to multi level models or to GEE estimation to deal with these dependencies Despite the enormous potential and applicability of these recent developments they require restrictive assumptions on the nature of the dependencies in the data The marginal models of this book provide another way of dealing with these dependencies without the need for such assumptions and can be used to answer research questions directly at the intended marginal level The maximum likelihood method with its attractive statistical properties is used for fitting the models This book has mainly been written with applied researchers in mind It includes many real world examples explains the types of research questions for which marginal modeling is useful and provides a detailed description of how to apply marginal models for a great diversity of research questions All these examples are presented on the book s website www.cmm.st along with user friendly programs Evolution of Social Networks Patrick Doreian,Frans Stokman,2013-02-01 This book answers the question of whether we can apply evolutionary theories to our understanding of the development of social structures Social networks have increasingly become the focus of many social scientists as a way of analyzing these social structures While many powerful network analytic tools have been developed and applied to a wide range of empirical phenomena

understanding the evolution of social organization still requires theories and analyses of social network evolutionary processes Researchers from a variety of disciplines have combined their efforts in what is an indication of some very promising future research and the work represented in this volume provides a basis for a sustained analysis of the evolution of social life

Psychosocial Stress Howard B. New Methods for Measuring and Analyzing Segregation Mark Fossett, 2017-09-14 This book is open access under a CC BY NC 2.5 license This book introduces new methods for measuring and analyzing residential segregation It begins by placing all popular segregation indices in the difference of group means framework wherein index scores can be obtained as simple differences of group means on individual level residential attainments scored from area racial composition Drawing on the insight that in this framework index scores are additively determined by individual residential attainments the book shows that the level of segregation in a given city can be equated to the effect of group membership e.g. race on individual residential attainments This unifies separate research traditions in the field by joining the analysis of segregation at the aggregate level with the analysis of residential attainments for individuals Next it shows how segregation analysis can be extended by using multivariate attainment models to assess the impact of group membership i.e. the level of segregation for a city while including controls for other relevant individual characteristics e.g. income education language nativity etc It then illustrates how one can use these models to quantitatively assess the extent to which segregation traces to impacts of group membership on residential attainments versus other factors such as group differences in income The book then shows how micro level attainment models can be used to study macro level variation in segregation specifically by estimating multi level

models of individual residential attainments to assess how the effect of group membership i.e segregation index scores vary with city characteristics Finally the book introduces refined versions of popular indices that are free of the vexing problem of upward bias This improves the quality of segregation measurement directly at the level of individual cases and expanding the number of cases that can be safely included in empirical studies

The Demography of Transforming Families Robert

Schoen,2023-08-23 This book provides an up to date survey on the nature causes and patterns of family change The traditional nuclear family has been replaced by a multiplicity of other forms as widespread cohabitation high levels of divorce and union dissolution rising childlessness and far below replacement fertility have emerged to an extent never before seen Theoretical perspectives on this Second Demographic Transition are presented highlighting the dramatic changes in gender roles New methodological strategies for assessing family dynamics are presented from multistate models of marriage and divorce combined with fertility to improved techniques for combining census and survey data on the family to a new approach for disentangling age period and cohort effects While the volume emphasizes Western nations insightful case studies range from analyzing family complexity in cohorts of parents and children in the UK to the impact of interpartner violence on family formation to the emergence of a gender war in South Korea By providing new insights into where we are today and how we got here the book will be of value to all those interested in the contemporary family Delayed Fertility as a Driver of Fertility Decline available open access under a Creative Commons Attribution 4.0 International License via link [springer.com](https://www.springer.com)

Economic Evolution and Demographic Change Günter Haag,Ulrich Mueller,Klaus G. Troitzsch,2012-12-06 The articles collected in this volume have two features in common they want to integrate economics demography and geography and they want to overcome the stationary approach in modelling in favour of a dynamic one The book is subdivided into three parts where Part I is focussing on economic evolution Part II on geographical development and Part III is related to demographic change The present volume aims at providing a new look at this triangle in view of the classical background of discussions by introducing new research ideas focussing in nonlinear dynamics and stochastic modelling Thus the main purpose of this book is to make a contribution to the interdisciplinary work needed to integrate the efforts between these three research fields and to serve as a research source in demonstrating the current state of art in dynamic modelling The book is addressed to social scientists in general and those in particular with a background in economics geographics and demographics It should also be of interest to mathematicians physicists and systems analysts interested in model building and applications of nonlinear dynamics
