Social Security Reform Potential Effects On Ssas Disability Programs And Beneficiaries:

Social Security Reform Barbara D. Bovbjerg, 2001-08 In 1999 disabled beneficiaries their families accounted for about 17% of all Social Security SS beneficiaries This report assesses the potential effects of Social Security reform options on the solvency of the Social Security Disability Insurance (DI) program trust fund the benefits disabled beneficiaries receive It analyzes both the potential effects of comprehensive SS reform proposals on the solvency of the DI trust fund on the benefits that disabled beneficiaries receive the likely contribution that individual proposal provisions would make to these effects

Examines the implications of SS reform for the Supplemental Security income individuals with disabilities **Social Security Reform** United States. Social Security Reform United States Government Accountability Office, 2017-10-04 Many recent Social Security reform proposals to improve program solvency include elements that would reduce benefits currently scheduled for future recipients To date debate has focused primarily on the potential impact on retirees with less attention to the effects on other Social Security recipients such as disabled workers and dependents As these beneficiaries may have fewer alternative sources of income than traditional retirees there has been interest in considering various options to protect the benefits of disabled workers and certain dependents This report examines 1 how certain elements of Social Security reform proposals could affect disability and dependent benefits 2 options for protecting these benefits and how they might affect disabled workers and dependents and 3 how protecting benefits could affect the Social Security program To conduct this study GAO used a microsimulation model to simulate benefits under various reform scenarios GAO also interviewed experts and reviewed various reform plans current literature and GAO's past work *Social security reform proposals could have a variety of effects on distribution of benefits and payroll taxes : testimony before the Special Committee on Aging, U.S. Senate*,

Social Security Reform Daniel Bertoni, 2011-03 Address issues related to the potential impact of raising the earliest eligibility age (EEA) or full retirement age (FRA) on the DI program and on older workers esp those approaching age 62 just prior to becoming eligible for retirement benefits This report answers these questions 1 What do the health occupational and demographic characteristics of those near retirement age indicate about the potential for these individuals to continue working at older ages 2 What effect would a change in EEA and FRA have on retirement and disability benefits and applications for disability 3 What policy options might help mitigate the effects of increased retirement ages on those who may not be able to work longer Illus A print on demand report **Need for Structural Reform of Social Security**

Social Security technically called the Old Age Survivors and Disability Insurance Program or OASDI is currently facing a long term projected financial shortfall due in large part to the changing demographics and aging of the U S population and it has been in this position for a number of years a significant worsening in the funding status was reported in 2009 This projected shortfall has been the center of discussion whenever advocates and policymakers have called for significant changes to the program to address the issues that are pushing it into financial trouble Without changes to eliminate the shortfall the program ultimately will be able to pay only about 75 percent of promised benefits called for under current law This paper analyzes various potential reform provisions that have been widely discussed that would affect the benefit levels and program revenues of Social Security This analysis also discusses the potential impact of these provisions on the financial status of the OASDI program The provisions discussed are those that would lower the scheduled increase in future benefit levels by changes to the benefit formula change the contribution and benefit base amount of earnings that are taxable and used for the calculation of benefits under OASDI and the taxation of benefits increase the retirement age All of these approaches have been part of various comprehensive reform proposals over the last two decades The degree to which any of the options analyzed in this paper would improve the actuarial balance of Social Security depends on how much emphasis policymakers might place on a specific provision Consequently a range of provisions is presented showing a variety of possible results Each provision has certain drawbacks but if the projected funding status of the program is to be improved some compromises will have to be made either benefits will need to be cut or revenues raised or some combination of these two options *Social security disability programs lag in promoting return to work : report to congressional committees , Final Report of the Social Security Disability Advisory Council* United States. Congress. House. Committee on Ways and Means. Subcommittee on Social Security,1989 *Labor Supply Effects of the Interaction Between the Social Security Disability and Retirement Programs at Full Retirement Age* Nicole Maestas,Na Yin,2010 The Social Security Disability Insurance DI program imposes strong work restrictions on beneficiaries however the causal effect of the work disincentives on labor supply has been difficult to estimate We take a new look at this question by exploiting the fact that DI benefits are payable only until full retirement age FRA at which point they are converted to retired worker benefits and the program s implicit high marginal tax rate on earnings is abruptly relaxed Using a quasi experimental research design we examine whether the DI work disincentives are binding by comparing changes in labor force participation rates before and after the FRA for DI beneficiaries and non beneficiaries We find a relative increase in labor force participation at FRA for DI beneficiaries of 10 4 percentage points and argue that this is likely a lower bound estimate on the labor supply disincentive effects of the DI
