Social Dreaming, Associative Thinking and Intensities of Affect Julian Manley, 2018-08-23 This book describes a way of sharing dreams in a group called social dreaming It explores how the sharing of real night time dreams in a group can offer information on and insight into ourselves and the worlds we live in and share It investigates how we can turn dream images and ideas and feelings that arise from these images into conscious thought before describing the ways in which these can be used Using a background of the psychosocial combined with a philosophical lens influenced by the work of Gilles Deleuze Julian Manley shows how social dreaming can be understood as a Deleuzian rhizome of affects a web or a root design where things interconnect in a random and spontaneous fashion rather than in a sequential or linear way He illustrates how social dreaming can link dreams together into a collage of images and compares this to the rhizome where clusters of emotional intensity which emerge from the dream images weave and interconnect with other clusters forming a web of interlinked dream images and emotions From the basis of this rhizome emerges an interpretation of social dreaming as a body without organs and the social dreaming matrix as a smooth space where meanings emerge from the way these images form connections and come and go according to our emotions at any particular moment
