Web Watching Larry Weber, 2018-01-09 This user friendly guide helps you untangle the mystery of spider webs and demystify the many purposes of silk featuring over 40 species of spiders and their webs [Investigating Spiders and Their Webs](#) Ellen René, 2008-07-15 Spiders are amazing architects They build webs for all sorts of reasons to catch dinner to keep their eggs safe to hide their homes and to sail to a new location With each turn of the page our young science detectives will find a new clue to unearth the reasons why spiders build webs *Spider Webs* William Eberhard, 2020-12-01 In this lavishly illustrated first ever book on how spider webs are built function and evolved William Eberhard provides a comprehensive overview of spider functional morphology and behavior related to web building and of the surprising physical agility and mental abilities of orb weavers For instance one spider spins more than three precisely spaced morphologically complex spiral attachments per second for up to fifteen minutes at a time Spiders even adjust the mechanical properties of their famously strong silken lines to different parts of their webs and different environments and make dramatic modifications in orb designs to adapt to available spaces This extensive adaptive flexibility involving decisions influenced by up to sixteen different cues is unexpected in such small supposedly simple animals As Eberhard reveals the extraordinary diversity of webs includes ingenious solutions to gain access to prey in esoteric habitats from blazing hot and shifting sand dunes to capture ants to the surfaces of tropical lakes to capture water striders Some webs are nets that are cast onto prey while others form baskets into which the spider flicks prey Some aerial webs are tramways used by spiders searching for chemical cues from their prey below while others feature landing sites for flying insects and spiders where the spider then stalks its prey In some webs long trip lines are delicately sustained just above the ground by tiny rigid silk poles Stemming from the author's more than five decades observing spider webs this book will be the definitive reference for years

to come Companion Species Mathilde van Dijk, 2024-11-28 This book explores the connection between saints and animals and how the power over animals has been a characteristic of saints from their beginnings in the Early Church The connection between saints and humans is examined with the saint as a human rising beyond humanity touching the divine and the non human animal as a creature which is connected to and yet removed from humanity and which may have a connection to the sacred itself This volume transcends traditional religious boundaries by including Christian saints as well as similar figures in Islam and Norse religions It operates on the cusp of two exciting and innovative fields hagiographic and animal studies It shows the complexities of human animal interaction and the sacred authorities clashing with experiential knowledge metaphorical animals as opposed to real animals ranging from helpers or opponents of saints disguises of demons or identity markers of a human community Companion Species will be of value to scholars and students interested in medieval history Europe and religion as well as social and cultural history
