Spins In Nuclear And Hadronic Reactions:

Spins in Nuclear and Hadronic Reactions Hiroyuki Yabu, Toru Suzuki, H. Toki, 2000 Spin physics is one of the most important and active areas of theoretical experimental nuclear physics In nuclear reactions the observations of spin polarizations give important clues to the nuclear structures and reaction mechanism For high energy nuclear physics the polarized quark parton distributions of the nucleon nucleus are studied intensively In the study of baryon structures and nuclear astrophysics spin is an important observable through hadron reactions The focus of these proceedings is on the spin dependent phenomena in nuclear and hadronic reactions and related topics in nuclear and hadron physics The main subjects covered are Spin polarization phenomena in nuclear and hadronic reactions spin dependent excitations in nuclei and spin observables recent development in nuclear reaction theories spin dependent phenomena in fundamental processes related topics

Neutrino Physics: Its Impact On Particle Physics, Astrophysics And Cosmology - Proceedings Of The Carolina Symposium On Neutrino Physics John N Bahcall, Wick C Haxton, Kuniharu Kubodera, Charles P Poole, 2001-05-14 Neutrinos play a key role in many areas of particle physics nuclear physics and astrophysics The recent discovery of neutrino oscillation has given the first hint of new physics beyond the standard model Clearly it is extremely important to study further the oscillation and other fundamental properties of neutrinos It is also important to improve our knowledge of neutrino nucleus reactions which are crucial for understanding a large class of astrophysical phenomena These and many other interesting questions can be investigated at stopped pion neutrino facilities like the one planned for the Spallation Neutron Source at the Oak Ridge National Laboratory The purpose

of the Carolina Symposium was twofold 1 to explore and exchange ideas on the latest developments in general frontiers of neutrino physics and related fields 2 to address specific issues pertaining to the above mentioned stopped pion neutrino facility Among the topics covered in the proceedings are cosmology and neutrino standard model tests with neutrinos neutrino oscillation experiments and theories dark matter search double beta decay rare events detection techniques the solar neutrino problem supernova explosion nucleosynthesis and the ORLaND project Spin and Isospin in Nuclear Interactions C.D. Lo Presti, 2004 *Spin Excitations in Nuclei* Fred Petrovich, 2012-12-06 This volume contains the proceedings of the International Conference on Spin Excitations in Nuclei held in Telluride Colorado March 25-27 1982 The motivation for the conference was in a large part due to the recent development of new variable energy accelerators which produce high quality beams of electrons protons and pions that are providing the first precise information on spin excitations in nuclei over a large range of spin and mass In the past such data had been restricted primarily to light nuclei and were generally resolution limited Perhaps the most exciting new result has

been the clear observation of the elusive spin dipole strength Gamow Teller and M1 in medium and heavy mass nuclei through the use of the p, n and p, p reactions at or near zero degrees with 100–200 MeV incident protons. Energy dependence in the isovector parts of the nucleon–nucleon interaction make the 100–200 MeV energy region particularly appropriate for such studies. The clean data from e, e , IT, IT , p, p and p, n on high spin stretched states which have particularly simple structure has also been quite important. The recent results contain important new information on the nature of the spin dependent forces in nuclei. These in turn are inherently related to the properties of the nuclear mesonic field and the underlying quantum chromodynamics.
