Bayesian Analysis of Failure Time Data Using P-Splines Matthias Kaeding, 2014-12-26 Matthias Kaeding discusses Bayesian methods for analyzing discrete and continuous failure times where the effect of time and or covariates is modeled via P splines and additional basic function expansions allowing the replacement of linear effects by more general functions The MCMC methodology for these models is presented in a unified framework and applied on data sets Among others existing algorithms for the grouped Cox and the piecewise exponential model under interval censoring are combined with a data augmentation step for the applications The author shows that the resulting Gibbs sampler works well for the grouped Cox and is merely adequate for the piecewise exponential model
