Subjected To Science Human Experimentation In America Before The Second World War:

Subjected to Science Susan E. Lederer, 1997 Long before the U S government began conducting secret radiation and germ warfare experiments and long before the Tuskegee syphilis experiments medical professionals had introduced and hotly debated the ethics of the use of human subjects in medical experiments In *Subjected to Science* Susan Lederer draws on published reports unpublished correspondence the popular press and antivivisection materials to provide the first full length history of biomedical research with human subjects from 1890 to 1940 *An American Health Dilemma* W. Michael

Byrd, Linda A. Clayton, 2001-12-21 First published in 2002 *An American Health Dilemma* is the story of medicine in the United States from the perspective of people who were consistently officially mistreated abused or neglected by the Western medical tradition and the US health care system It is also the compelling story of African Americans fighting to participate fully in the health care professions in the face of racism and the increased power of health corporations and HMOs This tour de force of research on the relationship between race medicine and health care in the United States is an extraordinary achievement by two of the leading lights in the field of public health Ten years out it is finally updated with a new third volume taking the story up to the present and beyond remaining the premiere and only reference on black public health and the history of African American medicine on the market today No one who is concerned with American race relations with access to and quality of health care or with justice and equality for humankind can afford to miss this powerful resource **A Companion**

to the History of Science Bernard Lightman, 2019-11-12 The Wiley Blackwell Companion to the History of Science is a single volume companion that discusses the history of science as it is done today providing a survey of the debates and issues that dominate current scholarly discussion with contributions from leading international scholars Provides a single volume overview of current scholarship in the history of science edited by one of the leading figures in the field Features forty essays by leading international scholars providing an overview of the key debates and developments in the history of science Reflects the shift towards deeper historical contextualization within the field Helps communicate and integrate perspectives from the history of science with other areas of historical inquiry Includes discussion of non Western themes which are integrated throughout the chapters Divided into four sections based on key analytic categories that reflect new approaches in the field

War and Childhood in the Era of the Two World Wars Mischa Honeck, James Marten, 2019-02-21 The histories of modern war and childhood were the result of competing urgencies According to ideals of childhood widely accepted throughout the world by 1900 children should have been protected even hidden from conflict and danger Yet at a time when modern ways of childhood became increasingly possible for economic social and political reasons it became less possible to fully protect them in the face of massive industrialized warfare driven by geopolitical rivalries and expansionist policies Taking a global perspective the chapters in this book examine a wide range of experiences and places In addition to showing how the engagement of children and youth with war differed according to geography technology class age race

gender and the nature of the state they reveal how children acquired agency during the twentieth century's greatest conflicts

The Social Medicine Reader, Volume I, Third Edition Jonathan Oberlander, Mara Buchbinder, Larry R. Churchill, Sue E. Estroff, Nancy M. P. King, Barry F. Saunders, Ronald P. Strauss, Rebecca L. Walker, 2019-05-31 The extensively updated and revised third edition of the bestselling Social Medicine Reader provides a survey of the challenging issues facing today's health care providers, patients, and caregivers by bringing together moving narratives of illness, commentaries by physicians, debates about complex medical cases, and conceptually and empirically based writings by scholars in medicine, the social sciences, and the humanities. Volume 1: Ethics and Cultures of Biomedicine contains essays, case studies, narratives, fiction, and poems that focus on the experiences of illness and of clinician-patient relationships. Among other topics, the contributors examine the roles and training of professionals alongside the broader cultures of biomedicine, health care experiences, and decisions regarding death, dying, and struggling to live, and particular manifestations of injustice in the broader health system. The Reader is essential reading for all medical students, physicians, and health care providers.

Teaching History with Science Fiction Films A. Bowdoin Van Riper, 2017-02-07 Popular media has become a common means by which students understand both the present and the past. Consequently, more teachers are using various forms of popular culture as pedagogical tools in the history classroom. Science fiction is one of the most popular genres of contemporary film, a genre that permeates much of the current culture. In order to facilitate the use of science fiction films as learning tools, teachers of history need a dependable resource. *Teaching History with Science Fiction Films* is a guide for teaching U.S. and world history. In addition to covering key themes and concepts, the volume provides an era-by-era overview of significant issues and related films, a tutorial in using film in historical methodology, user guides for 10 key science fiction films, and sample exercises and assignments for direct classroom use. Among the films covered in this book are staples of American cultural literacy, including *Things to Come*, *The Day the Earth Stood Still*, *Soylent Green*, and *Independence Day*. Covering conceptual topics such as geopolitics, environmental consciousness, imperialism, immigration, gender roles, and technological innovation across the decades, *Teaching History with Science Fiction Films* will enable classroom teachers to effectively use movies to examine key social and cultural issues, concepts, and influences in their historical context. With a list of more than 90 recommended films, this volume will be an invaluable asset to any teacher of history.

Medical History Ian Miller, 2018-09-19 This introductory textbook presents medical history as a theoretically rich discipline, one that constantly engages with major social questions about ethics, bodies, state, power, disease, public health, and mental disorder. Providing both instructors and students with an account of the changing nature of medical history research since it first emerged as a distinct discipline in 19th-century Germany, this essential guide covers the theoretical development of medical history and evaluates the various approaches adopted by doctors, historians, and sociologists. Synthesising historiographical material ranging from the 19th to 21st centuries, this is an ideal resource for postgraduate students from History and History of

Medicine degrees taking courses on historiography the theory of history and medical history **Selling Science** Stephen E. Mawdsley, 2016-08 Today when many parents seem reluctant to have their children vaccinated even with long proven medications the Salk vaccine trial which enrolled millions of healthy children to test an unproven medical intervention seems nothing short of astonishing In *Selling Science* medical historian Stephen E Mawdsley recounts the untold story of the first large clinical trial to control polio using healthy children 55 000 healthy children revealing how this long forgotten incident cleared the path for Salk's later trial Mawdsley describes how in the early 1950s Dr William Hammon and the National Foundation for Infantile Paralysis launched a pioneering medical experiment on a previously untried scale Conducted on over 55 000 healthy children in Texas Utah Iowa and Nebraska this landmark study assessed the safety and effectiveness of a blood component gamma globulin to prevent paralytic polio The value of the proposed experiment was questioned by many prominent health professionals as it harbored potential health risks but as Mawdsley points out compromise and coercion moved it forward And though the trial returned dubious results it was presented to the public as a triumph and used to justify a federally sanctioned mass immunization study on thousands of families between 1953 and 1954 Indeed the concept conduct and outcome of the GG study were sold to health professionals medical researchers and the public at each stage At a time when most Americans trusted scientists their mutual encounter under the auspices of conquering disease was shaped by politics marketing and at times deception Drawing on oral history interviews medical journals newspapers meeting minutes and private institutional records *Selling Science* sheds light on the ethics of scientific conduct and on the power of marketing to shape public opinion about medical experimentation *The Ethical Case against Animal Experiments* Andrew Linzey, Clair Linzey, 2017-12-21 At present human beings worldwide are using an estimated 115 3 million animals in experiments a normalization of the unthinkable on an immense scale In terms of harm pain suffering and death animal experiments constitute one of the major moral issues of our time Given today's deeper understanding of animal sentience the contributors to this volume argue that we must afford animals a special moral consideration that precludes their use in experiments *The Ethical Case against Animal Experiments* begins with the Oxford Centre for Animal Ethics's groundbreaking and comprehensive ethical critique of the practice of animal experiments A second section offers original writings that engage with and elaborate on aspects of the Oxford Centre report The essayists explore historical philosophical and personal perspectives that range from animal experiments in classical times to the place of necessity in animal research to one researcher's painful journey from researcher to opponent A devastating look at a contemporary moral crisis *The Ethical Case against Animal Experiments* melds logic and compassion to mount a powerful challenge to human cruelty *Locating Health* Erika Dyck, Christopher Fletcher, 2015-10-06 The essays in this collection focus on the dynamic relationship between health and place Historical and anthropological perspectives are presented each discipline having a long tradition of engaging with these concepts The resulting dialogue should produce a new layer of methodology enhancing both fields
