The Last Ape Pygmy Chimpanzee Behavior And Ecology:

The Last Ape Takayoshi Kano, Takayoshi Kanō, 1992 Not last because all the others are about to die out but because they are the most recent of the apes to be studied thoroughly Kano zoology Primate Research Institute Kzota Japan recounts his observations and experiences in the Wamba Forest Zaire 1974 85 studying what many believe to be the species most closely related to humans He particularly notes how the lifelong sexual and quasi sexual behavior among individuals of any age and gender alleviates the competition and dominance prevalent among other primates Annotation copyrighted by Book News Inc Portland OR **The Last Ape** Takayoshi Kanō, 1992 Great Ape Societies William C. McGrew, Linda F.

Marchant, Toshisada Nishida, 1996-07-28 The great apes chimpanzees bonobos gorillas and orangutans are our closest living relatives sharing a common ancestor only five million years ago We also share key features such as high intelligence omnivorous diets prolonged child rearing and rich social lives The great apes show a surprising diversity of adaptations particularly in social life ranging from the solitary life of orangutans through patriarchy in gorillas to complex but different social organisations in bonobos and chimpanzees As great apes are so close to humans comparisons yield essential knowledge for modelling human evolutionary origins Great Ape Societies provides comprehensive up to date syntheses of work on all four species drawing on decades of international field work zoo and laboratory studies It will be essential reading for students and researchers in primatology anthropology psychology and human evolution **Behavioural Diversity in**

Chimpanzees and Bonobos Christophe Boesch, Gottfried Hohmann, Linda Frances Marchant, 2002-08 Chimpanzees Pan troglodytes and bonobos Pan paniscus otherwise known as pygmy chimpanzees are the only two species of the genus Pan As they are our nearest relatives there has been much research devoted to investigating the similarities and differences between them This book offers an extensive review of the most recent observations to come from field studies on the diversity of Pan social behaviour with contributions from many of the world's leading experts in this field A wide range of social behaviours is discussed including tool use hunting reproductive strategies and conflict management as well as demographic variables and ecological constraints In addition to interspecies behavioural diversity this text describes exciting new research into variations between different populations of the same species Researchers and students working in the fields of primatology anthropology and zoology will find this a fascinating read *Chimpanzee Cultures* Richard W. Wrangham, 1996 Compares

and contrasts the ecology social relations and cognition of chimpanzees bonobos and occasionally gorillas **The Bonobos** Takeshi Furuichi, Jo Thompson, 2007-12-24 Once one of the least studied of the great apes this new text covers the latest research into these fascinating creatures Split into two parts it covers scientific research which has attempted to answer why bonobos have some unique characteristics such as high social status of females and flexible social relationships Then it moves on to conservation Both the local and global aspects of the factors threatening the wild bonobo population are reviewed The Mind of the Chimpanzee Elizabeth V. Lonsdorf, Stephen R. Ross, Tetsuro Matsuzawa, 2010-08-15

Understanding the chimpanzee mind is akin to opening a window onto human consciousness. Many of our complex cognitive processes have origins that can be seen in the way that chimpanzees think, learn, and behave. *The Mind of the Chimpanzee* brings together scores of prominent scientists from around the world to share the most recent research into what goes on inside the mind of our closest living relative. Intertwining a range of topics including imitation, tool use, face recognition, culture, cooperation, and reconciliation, with critical commentaries on conservation and welfare, the collection aims to understand how chimpanzees learn, think, and feel so that researchers can not only gain insight into the origins of human cognition but also crystallize collective efforts to protect wild chimpanzee populations and ensure appropriate care in captive settings. With a breadth of material on cognition and culture from the lab and the field, *The Mind of the Chimpanzee* is a first-rate synthesis of contemporary studies of these fascinating mammals that will appeal to all those interested in animal minds and what we can learn from them.

The Mentalities of Gorillas and Orangutans Sue Taylor Parker, Robert W. Mitchell, H. Lyn Miles, 1999-08-26

Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution. In contrast, less attention has been paid to the abilities of gorillas and orangutans. This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective. The introductory chapters set the evolutionary context for comparing cognition in gorillas and orangutans to that of chimpanzees, bonobos, and humans. The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes, including performances in the classic domains of tool use and tool making, imitation, self-awareness, social communication, and symbol use. All those wanting more information on the mental abilities of these sometimes neglected but important primates will find this book a treasure trove.

The Gestural Communication of Apes and Monkeys Josep Call, Michael Tomasello, 2020-08-18

The Gestural Communication of Apes and Monkeys is an intriguing compilation of naturalistic and experimental research conducted over the course of 20 years on gestural communication in primates as well as a comparison to what is known about the vocal communication of nonhuman primates. The editors also make systematic comparisons to the gestural communication of prelinguistic and just linguistic human children. An enlightening exploration unfolds into what may represent the starting point for the evolution of human communication and language. This especially

significant read is organized into nine chapters that discuss the gestural repertoire of chimpanzees gestures in orangutans subadult gorillas and siamangs gestural communication in Barbary macaques and a comparison of the gestures of apes and monkeys This book will appeal to psychologists anthropologists and linguists interested in the evolutionary origins of language and or gestures as well as to all primatologists A CD insert offers video of gestures for each of the species
