Scotch Baronial Miles Glendinning, Aonghus MacKechnie, 2019-01-10 As the debate about Scottish independence rages on this book takes a timely look at how Scotland's politics have been expressed in its buildings exploring how the architecture of Scotland in particular the constantly changing ideal of the castle has been of great consequence to the ongoing narrative of Scottish national identity Scotch Baronial provides a politically framed examination of Scotland's kaleidoscopic castle architecture tracing how it was used to serve successive political agendas both prior to and during the three unionist centuries from the early 17th century to the 20th century The book encompasses many of the country's most important historic buildings from the palaces left behind by the lost monarchy to revivalist castles and the proud town halls of the Victorian age examining their architectural styles and tracing their wildly fluctuating political and national connotations It ends by bringing the story into the 21st century exploring how contemporary neo-modernist architecture in

today's Scotland as exemplified in the Holyrood parliament relates to concepts of national identity in architecture over the previous centuries

Trees in Towns and Cities Mark Johnston, 2015-08-31 This is the first book on the history of trees in Britain's towns and cities and the people who have planted and cared for them. It is a highly readable and authoritative account of the trees in our urban landscapes from the Romans to the present day, including public parks, private gardens, streets, cemeteries, and many other open spaces. It charts how our appreciation of urban trees and woodland has evolved into our modern understanding of the many environmental, economic, and social benefits of our urban forests. A description is also given of the various threats to these trees over the centuries, such as pollution damage during the Industrial Revolution and the recent ravages of Dutch elm disease. Central and local government initiatives are examined together with the contribution of civic and amenity societies. However, this historical account is not just a catalogue of significant events but gives a deeper analysis by exploring fundamental issues such as who owned those treed landscapes, why they were created, and who had access to them. The book concludes with the fascinating story of how trees have contributed to efforts to improve urban conditions through various visions of urban green, such as the model villages, garden cities, garden suburbs, and the new towns. Studies in garden and landscape history have often been preoccupied with those belonging to the rich and powerful. This book focuses particularly on working people and the extent to which they have been able to enjoy urban trees and greenspace. It will appeal to a general readership, especially those with an interest in garden history, heritage landscapes, and the natural and built environment. Its meticulous referencing will also ensure it is much appreciated by students and academics pursuing further reading and research. It is written by an internationally renowned arboriculturist who combines a passion for trees with a sound understanding of British social and cultural history.
