Situation In Logic

Michael Seilmaier

Situation In Logic:

The Situation in Logic Jon Barwise, 1989 Situation Theory and situation semantics are recent approaches to language and information approaches first formulated by Jon Barwise and John Perry in Situations and Attitudes 1983 The present volume collects some of Barwise's papers written since then those directly concerned with relations among logic situation theory and situation semantics Several papers appear here for the first time

The Situation in Logic: On the model theory of common knowledge Jon Barwise, 1988 *Relevant Logic* Edwin D. Mares, 2004-02-26 This book introduces the reader to relevant logic and provides it with a philosophical interpretation The defining feature of relevant logic is that it forces the premises of an argument to be really used relevant in deriving its conclusion The logic is placed in the context of possible world semantics and situation semantics which are then applied to provide an understanding of the various logical particles especially implication and negation and natural language conditionals The book ends by examining various applications of relevant logic and presenting some interesting open problems

Johan van Benthem on Logic and Information

Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27 This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

Wainwright, 2005-02-10 Covers the state of the art in the philosophy of maths and logic giving the reader an overview of the major problems positions and battle lines The chapters in this book contain both exposition and criticism as well as substantial development of their own positions It also includes a bibliography

Essays in Logical Philosophy Andrzej Wisniewski, 2013 This collection of papers is written in the spirit of what is nowadays called Logical Philosophy The topics addressed include skepticism and the criterion of truth situational semantics computational aspects of possible worlds semantics and question answer systems occurrent beliefs the logical omniscience paradox paraconsistency and models of explanatory procedures Series Development in Humanities Vol 12

Logical Pluralism JC Beall, Greg Restall, 2006 Consequence is at the heart of logic and an account of consequence offers a vital tool in the evaluation of arguments This text presents what the authors term as logical pluralism arguing that the notion of logical consequence doesn't pin down one deductive consequence relation it allows for many of them

John Dewey's Earlier Logical Theory James Scott Johnston, 2014-11-06 When John Dewey's logical theory is discussed the focus is invariably on his 1938 book *Logic The Theory of Inquiry* His earlier logical works are seldom referenced except in relation to that later work As a result Dewey's earlier logical theory is cut off from his later work and this later work receives a curiously ahistorical gloss Examining the earlier works from *Studies in Logical Theory* to *Essays in Experimental Logic* James Scott Johnston provides an unparalleled account of the development of Dewey's thinking in logic examining various themes and

issues Dewey felt relevant to a systematic logical theory These include the context in which logical theory operates the ingredients of logical inquiry the distinctiveness of an instrumentalist logical theory and the benefit of logical theory to practical concerns particularly ethics and education Along the way and complicating the standard picture of Dewey's logic being indebted to Charles S Peirce William James and Charles Darwin Johnston argues that Hegel is ultimately a more important influence

A Life Worth Living Mihaly Csikszentmihalyi, Isabella Selega Csikszentmihalyi, 2006-04-20 A Life Worth Living brings together the latest thought on Positive Psychology from an international cast of scholars It includes historical philosophical and empirical reviews of what psychologists have found to matter for personal happiness and well being The contributions to this volume agree on principles of optimal development that start from purely material and selfish concerns but then lead to ever broader circles of responsibility embracing the goals of others and the well being of the environment on the importance of spirituality on the development of strengths specific to the individual Rather than material success popularity or power the investigations reported in this volume suggest that personally constructed goals intrinsic motivation and a sense of autonomy are much more important The chapters indicate that hardship and suffering do not necessarily make us unhappy and they suggest therapeutical implications for improving the quality of life Specific topics covered include the formation of optimal childhood values and habits as well as a new perspective on aging This volume provides a powerful counterpoint to a mistakenly reductionist psychology They show that subjective experience can be studied scientifically and measured accurately They highlight the potentiality for autonomy and freedom that is among the most precious elements of the human condition Moreover they make a convincing case for the importance of subjective phenomena which often affect happiness more than external material conditions After long decades during which psychologists seemed to have forgotten that misery is not the only option the blossoming of Positive Psychology promises a better understanding of what a vigorous meaningful life may consist of

Problems of Science Federigo Enriques, Katharine Head Royce, 1914 Purchase of this book includes free trial access to [www million books com](http://www.millionbooks.com) where you can read more than a million books for free This is an OCR edition with typos Excerpt from book I INTRODUCTION 1 THE SPECIAL PROBLEMS AND GENERAL IDEAS OF SCIENCE A DOUBLE fatality hangs over one who has consecrated his days to science If he would contribute to the advancement of science he must prepare himself first of all by a patient study of the thousands of details which constitute its technique he must learn the results obtained by numberless laborers whose researches tend toward the same aim He must master their conceptions and subject them to a new criticism This work so engrosses the attention of the investigator that he has little time left for casting a glance over the branches of science which are developing beside him Yet this necessity also weighs upon his soul If on the one hand he ought to study special problems on the other he cannot exempt himself from considering the ends set before special research by rising to a general outlook which shall command the view of a broader scientific basis This double necessity causes a conflict of tendencies and this

conflict in our system of production results in a loss of time and of work from which the intellectual world suffers Most investigators if they are not rightly directed shut themselves up in a narrow circle and fall into a blind empiricism Others lose themselves in the region of confused generalities while a few finer spirits find the way for themselves and often must win again by fresh efforts that which they should have a right to expect as the outcome of the completed work of their companions in labor But the age of heroes that of Descartes or Leibniz whose genius opened all the doors of science seems closed forever The conquests of the past weigh upon the present and upon the future And if it is permissible to hope that a happier use of our intellectual power
