Priya, 2019-12-23 Machine Vision systems combine image processing with industrial automation. One of the primary areas of application of Machine Vision in the Industry is in the area of Quality Control. Machine vision provides fast, economic and reliable inspection that improves quality as well as business productivity. Building machine vision applications is a challenging task as each application is unique with its own requirements and desired outcome. A Guide to Machine Vision

in Quality Control follows a practitioner's approach to learning machine vision. The book provides guidance on how to build machine vision systems for quality inspections. Practical applications from the Industry have been discussed to provide a good understanding of usage of machine vision for quality control. Real world case studies have been used to explain the process of building machine vision solutions. The book offers comprehensive coverage of the essential topics that includes Introduction to Machine Vision, Fundamentals of Digital Images, Discussion of various machine vision system components, Digital image processing related to quality control, Overview of automation. The book can be used by students and academics as well as by industry professionals to understand the fundamentals of machine vision. Updates to the on going technological innovations have been provided with a discussion on emerging trends in machine vision and smart factories of the future.

Applied Reliability and Quality Balbir S. Dhillon, 2007-02-23

Billions of dollars are being spent annually world wide to develop reliable and good quality products and services. Global competition and other factors are forcing manufacturers and others to produce highly reliable and good quality products and services. This means that reliability and quality principles are now being applied across many diverse sectors of economy and each of these sectors: robotics, health care, power generation, the Internet, textile, food and software has tailored reliability and quality principles, methods and procedures to satisfy its specific need. Reliability and quality professionals working in these areas need to know about each other's work activities because this may help them directly or indirectly to perform their tasks more effectively.

Applied Reliability and Quality Fundamentals: Methods and Procedures meets the need for a single volume that considers applied areas of both reliability and quality. Before now there has not been one book that covers both applied reliability and quality so to gain knowledge of each other's specialties these people had to study various books, articles or reports on each area. As the first book of its kind, Applied Reliability and Quality Fundamentals: Methods and Procedures will be useful to design engineers, manufacturing engineers, system engineers, engineering and manufacturing managers, reliability specialists, quality specialists, graduate and senior undergraduate students of engineering, researchers and

instructors of reliability and quality and professionals in areas such as health care software power generation robotics textile food and the Internet

Advances in Information Processing and Protection Jerzy Pejas, Khalid Saeed, 2007-09-29 The Computer Science is relatively new field which is developing very fast not only because due to the huge interest of scientists and the market request but also because this science has created possibilities for people of investigation and solved many problems that some time ago seemed to be insolvable Such problems had only been described in science fiction novels like underwater journeys of captain Nemo described by Jules Verne in XIX century At present various human dreams are successively becoming reality exactly as the underwater journeys became possible in the XX century The proposed book gives you a view of the progress in such domains of Computer Science as Artificial Intelligence Biometrics Security of Information Technology Computer Information Systems and Industrial Management The works contained in the book describe the newest investigation results of devoted scientists from Europe and Asia The book is written in a hard scientific language It is really valuable and I am sure it will deliver you many scientific benefits Professor Andrzej Piegat Szczecin University of Technology Faculty of Computer Science and Information Systems and University of Szczecin Poland Faculty of Economic Sciences and Management
