Helix-loop-helix Transcription Factors Trevor D. Littlewood, Gerard I. Evan, 1998 Helix Loop Helix HLH proteins are involved in transcriptional regulation of gene expression The HLH domain is a DNA binding dimerization domain which mediates homodimerization and heterodimerization with other HLH proteins This new volume in the Protein Profile series explores the sequence specificity of DNA binding the nature of dimerization partners the regulation of target genes by HLH proteins and the negative regulation of some bHLH proteins by HLH proteins which lack a functional DNA binding domain Topics include the role of HLH proteins in such diverse areas as myogenesis neurogenesis haematopoiesis and sex determination tissue specific HLH proteins the role of HLH proteins in yeast and plants nuclear localization of HLH proteins transactivation domains and post translational modification *Endocrine and Paracrine Regulation of Spermatogenesis - A Collection of Up to Date Research Contributions on Testis Formation and Function* Erwin Goldberg, Barry Zirkin, Vassilios Papadopoulos, Polina V. Mechanisms Of Gene Expression: Structure, Function And Evolution Of The Basal Transcriptional Machine

Robert O J Weinzierl,1999-08-10 A detailed knowledge of the mechanisms underlying the transcriptional control of gene expression is of fundamental importance to many areas of contemporary biomedical research ranging from understanding basic issues such as control of embryonic development to practical applications in industry and medicine Although elementary concepts of gene expression are described in all general molecular biology textbooks the depth of coverage is often rather limited and recent discoveries are sometimes not adequately taken into consideration This book presents much of the current thinking concerning molecular mechanisms of transcriptional control in a form easily accessible to undergraduates with an understanding of basic molecular biology concepts It contains detailed information about the various pro and eukaryotic transcriptional machineries that has recently become available through the combined efforts of geneticists biochemists and structural biologists The book will thus not only serve as an undergraduate text but also offer something new and interesting to more advanced readers and professional scientists who want to keep up to date with rapid advances in this field

Plant Transcription Factors Daniel H Gonzalez,2015-07-07 Plant Transcription Factors Evolutionary Structural and Functional Aspects is the only publication that provides a comprehensive compilation of plant transcription factor families and their complex roles in plant biology While the majority of information about transcription factors is based on mammalian systems this publication discusses plant transcription factors including the important aspects and unifying themes to understanding transcription factors and the important roles of particular families in specific processes Provides an entry point for transcription factor literature Offers compilation of information into one single resource for rapid consultation on different plant transcription factor features Integrates the knowledge about different transcription factors along with cross referencing Provides information on the unique aspects surrounding plant transcription factors

The Physics of Protein Structure and Dynamics Reinhard Schweitzer-Stenner,2024-09-23 The Physics of Protein Structure and Dynamics looks at various aspects of protein structure and dynamics from a physico chemical point of view It goes into some depth regarding the description of non covalent forces that determine the relative stability of folded and unfolded proteins Anharmonic protein dynamics involving motions between different minima of a rugged Gibbs energy landscape is described in great detail The book combines various aspects of the protein folding unfolding processes with an overview of intrinsically

disordered proteins which have attracted considerable interest of the protein community over the last 25 years but are thus far underrepresented in classroom oriented textbooks The book looks at protein folding and intrinsically disordered proteins as heavily interrelated topics that need to be viewed together Furthermore it presents some basic physico chemical aspects of protein peptide self assembly into nanoscale fibrils Intrinsically disordered peptides and proteins play a major role particularly in aggregation and self assembly processes that lead to various diseases Alzheimer Parkinson Huntington Mad Cow Therefore the relevance of protein disorder for protein self assembly deserves a closer look Protein self assembly cannot be separated from protein folding since it is frequently the product of misfolding With regard to modern theories the folding processes are linked to insights on protein dynamics and the discovered relationship between proteins and spin glasses The readers will benefit from being provided with an in depth overview of the physical concepts that govern different aspects of protein folding disorder and self assembly By emphasizing the relationship between these issues the approach adds a holistic character to the book The book is to a major extent mathematically based Mathematics is part of the language of physicists and physical chemists which cannot be properly substituted by words For instructors the book will offer a unique source for her his teaching of current protein physics issues The way how the book will be constructed multiple references to primary literature with DOI links literature based problem sets and topics for discussion will facilitate a learning process suitable for research oriented students Problem solving frequently requires the writing of short computer programs something that is underemphasized in chemistry and biochemistry education with the exception of computationally trained students of course

Helicases from All Domains of Life Renu Tuteja, 2018-09-21 Helicases from All Domains of Life is the first book to compile information about helicases from many different organisms in a single volume Research in the helicase field has been going on for a long time now but the completion of so many genomes of these ubiquitous enzymes has made it difficult to keep up with new discoveries As the huge number of identified DNA and RNA helicases along with the structural and functional differences among them make it difficult for the interested scholar to grasp a comprehensive view of the field this book helps fill in the gaps Presents updates on the functions and features of helicases across the different kingdoms Begins with a chapter on the evolutionary history of helicases Contains specific chapters on selected helicases of great importance from a biological applicative point of view

The IGF System Ron G. Rosenfeld, Charles T. Roberts, 1999-06-01 It has been over 40 years since the original report by Salmon and Daughaday demonstrating that the ability of GH to stimulate sulfation of cartilage was mediated by a sulfation factor In the ensuing decades it has become apparent that this sulfation factor activity encompasses a complex system of ligands IGFs receptors and carrier proteins that are in turn responsible for a wide array of cellular actions The IGF system has been demonstrated to be critically involved in both intrauterine and postnatal growth and to have important implications in cancer biology as well owing to the ability of the IGFs to function in endocrine paracrine and autocrine modes and given the wide distribution of IGFs in virtually every organ system The contributions to

The GF System reflect the wide span of interest in the IGF system and its implications for normal and abnormal growth and metabolism The chapters have been divided into four broad sections I Molecular biology of the IGF system II Bio logical actions of the IGFs III IGF physiology and IV Clinical aspects of the IGFs We have made every effort to highlight the major contemporary themes in IGF biology but as is inevitable in such a fast moving field perspectives will continue to change as new information is accumulated

Cell-Cell Signaling in Vertebrate Development E.J. Robertson,2012-12-02 Cell Cell Signaling in Vertebrate Development provides a comprehensive discussion of cell cell interactions in vertebrate development and the molecular signals that mediate them The book is divided into six parts arranged according to major developmental phenomena demonstrated in illustrative systems derived from amphibian avian mammalian and piscine sources Part I introduces the mechanisms of gene activation in the context of early vertebrate development Part II is concerned with cellular contacts and the induction process Cell cell interactions are illustrated through analyses of neurogenesis in the mouse embryonic induction is considered in the frog and in the chick Part III deals with cell migration and differentiation It examines cell lineages in the frog eyebud migration phenomena in connection with axon guidance in the embryonic rat spinal cord and mouse visual system pathfinding by primary motoneurons and the formation of terminal arbors in zebrafish embryos Part IV discusses developmental processes that depend on diffusible signals and signal gradients Part V illustrates pattern formation as exemplified in the developing chick hindbrain and in urodele limb regeneration Part VI highlights gene expression and its regulation by transcription factors or growth factors in rodent development
