*Sinkholes and Subsidence* Tony Waltham,Fred G. Bell,Martin G. Culshaw,2005 Sinkholes and Subsidence will provide a twenty first century account of how the various subsidence features in carbonate and evaporite rocks cause problems in development and construction in our living environment The authors consider the various methods used in site investigations both direct and indirect to locate the features associated with these associated hazards and risks highlighting the value of hazard mapping Various ground improvement techniques such as grouting and the special types of foundation structures which deal with these problems are covered towards the end of the book This book is supplemented with a wealth of actual case studies and solutions written by invited experts TOC Introduction Classification and nomenclature Failures in rock collapse and caprock sinkholes Failures in soil subsidence sinkholes Buried sinkholes Induced sinkholes Collapses in basalt lavas Investigation direct methods geophysical methods site characterization hazard maps Engineering and remediation foundations reservoirs dams ground treatment Case histories    **Sinkholes and subsidence caused by subsurface erosion** G.
