*Six Wings* George Sarton,1963      **By George Sarton, Six Wings, Men of Science in the Renaissance...** George Sarton,1957      **Six Wings** Chien-Nung Li,1957      *Six Wings* George Sarton,1963      *Six Wings* George Sarton,1960      **A History of Science, Magic and Belief** Steven P. Marrone,2014-12-11 A History of Science Magic and Belief is an exploration of the origins of modern society through the culture of the middle ages and early modern period By examining the intertwined paths of three different systems for interpreting the world it seeks to create a narrative which culminates in the birth of modernity It looks at the tensions and boundaries between science and magic throughout the middle ages and how they were affected by elite efforts to rationalise society often through religion The witch crazes of the sixteenth and seventeenth century are seen as a pivotal point and the emergence from these into social peace is deemed possible due to the Scientific Revolution and the politics of the early modern state This book is unique in drawing together the histories of science magic and religion It is thus an ideal book for those studying any or all of these topics and with its broad time frame it is also suitable for students of the history of Europe or Western civilisation in general      **A World of Light** May Sarton,2014-07-22 This captivating book by May Sarton rejoices in friendship and family In A World of Light renowned poet and novelist May Sarton renders unforgettable portraits of the friends she considers family and the family she looks upon as friends From her father famed science historian George Sarton she learns that work is of the first importance Her mother Mabel an artist in her own right is her dearest friend Sarton also introduces us to fellow creative minds Elizabeth Bowen and Louise Brogan Swiss vigneron Marc Turian a New Hampshire painter named Quig and many others Sarton crosses oceans and continents as she chronicles the enduring connections she has made and how each has enriched her life Tender and passionate candid and evocative A World of Light is about what it means to be an artist and a human This ebook features an extended biography of May Sarton      **Concepts of Nature** Hans Ulrich Vogel,Günter Dux,2010-08-13 This book inspired by the sociologist G nter Dux co edited by the historian Hans Ulrich Vogel and introduced by Mark Elvin is a collective intellectual masterpiece written by some of the world s leading scholars Its purpose is to illuminate premodern Chinese ways of thinking about Nature by comparing them with their counterpart traditions in Europe In so doing it also subtly reshapes our understanding of premodern European concepts of the natural world The domains covered principally include philosophy language poetry science and mathematics and their relations with society technology and politics By analyzing the frequent partial similarities between these great two cultural areas in the context of their overall contrasts it points the way for the first time to defining accurately the differences that have been critical for world history      *Rabelaisian Dialectic and the Platonic-Hermetic Tradition* George Mallary Masters,Timothy Carl McMasters,1969-01-01 In this study Professor Masters looks beyond the few critical attempts that heretofore have analyzed only isolated aspects of Platonism and Hermetism in Rabelaisian literature He examines the closely related themes of Platonism the Dionysian mysteries and the Hermetic

sciences in Rabelais's work and concludes that Rabelais shared with the Platonic Hermetic tradition both its dialectic and perception of man's position in the universe. In the perspective of Platonic dialectic Professor Masters analyzes Rabelaisian allegory, symbolism and imagery as a play on appearance and reality. Through the allegorical myths of Gargantua and Pantagruel Rabelais rejects the seemingly dichotomous extremes of materialism and ascetic spiritualism while his philosophy of Pantagruelism shows a positive acceptance of both the physical world and contemplative thought. Through the symbolism of wine Rabelais manifests the Platonic ideal of Love, Harmony, Order on the literal level of conviviality in the philosophical dialogue of the symposium and in the intuitive dialectic of Socratic contemplation. In Rabelais's view man can achieve self-knowledge only through reasonable control and by actively establishing a balance with society, nature and God. The magus may diabolically use the sciences of astrology, magic, alchemy and the Cabala in an attempt to subject the world to his own will or he may achieve unity with himself and his total environment by restoring in himself the harmonious order he finds in the cosmos. In an appendix Professor Masters examines the continuity of the several themes of the Platonic Hermetic tradition as they occur in the five books of the Rabelaisian corpus. He concludes as two corollaries of the main thesis that their constant recurrence demonstrates the thematic unity of the five books and the authenticity of Book Five.

**Philosophy and the Puzzles of Hamlet** Leon Harold Craig, 2014-07-31 Shakespeare's famous play Hamlet has been the subject of more scholarly analysis and criticism than any other work of literature in human history. For all of its generally acknowledged virtues, however, it has also been treated as problematic in a raft of ways. In *Philosophy and the Puzzles of Hamlet* Leon Craig explains that the most oft-cited problems and criticisms are actually solvable puzzles. Through a close reading of the philosophical problems presented in Hamlet, Craig attempts to provide solutions to these puzzles. The posing of puzzles, some more conspicuous, others less so, is fundamental to Shakespeare's philosophical method and purpose. That is, he has crafted his plays and Hamlet in particular so as to stimulate philosophical activity in the judicious, as distinct from the unskillful readers. By virtue of showing what so many critics treat as faults or flaws are actually intended to be interpretive challenges, Craig aims to raise appreciation for the overall coherence of Hamlet, that there is more logical rigor to its plot and psychological plausibility to its characterizations than is generally granted, even by its professed admirers. *Philosophy and the Puzzles of Hamlet* endeavors to make clear why Hamlet as a work of reason is far better than is generally recognized and proves its author to be not simply the premier poet and playwright; he is already universally acknowledged to be but a philosopher in his own right.

**Transnational Political Spaces** Mathias Albert, 2009-10-05 From a decidedly multidisciplinary perspective, the articles in *Transnational Political Spaces* address the notion that political space is no longer fully congruent with national borders. Instead, there are areas called transnational political spaces caused by factors such as migration and social transformation where policy occurs oblivious to national pressure. Organized into three sections: transnational actors, transnational spaces and critical encounters, this volume explains how these spaces are formed and

defined and how they can be traced and conceptualized Aus interdisziplinärer Perspektive gehen die Beiträge der Frage nach wie transnationale politische Räume hervorgebracht und gestaltet werden Dabei sind diese nicht rein territorial definiert Einbezogen werden Identitäten und Interaktionen die nationale Grenzen überschreiten wie sie etwa durch Migration entstehen

English almanacs, astrology and popular medicine, 1550-1700 Louise Hill-Curth, 2018-09-30 Early modern almanacs have received relatively little academic attention over the years despite being the first true form of British mass media While their major purpose was to provide annual information about the movements of the stars and the corresponding effects on Earth most contained a range of other material including advice on preventative and remedial medicine for humans and animals Based on the most extensive research to date into the relationship between the popular press early modern medical beliefs and practices this study argues that these cheap annual booklets played a major role in shaping contemporary medical beliefs and practices in early modern England Beginning with an overview of printed vernacular medical literature the book examines in depth the genre of almanacs their authors target and actual audiences It discusses the various types of medical information and advice in almanacs preventative and remedial medicine for humans as well as non commercial and

commercial medicines promoted in almanacs and the under explored topic of animal health care Christian Humanism Alasdair A. MacDonald, Z.R.W.M. von Martels, Jan Veenstra, 2009-03-25 It is a misconception that Christianity and Humanism are in any way in conflict with each other The present book shows that through many centuries and especially in the Renaissance the two stood in a relation that was mutually complementary The contributions in this volume treat aspects and manifestations of this cultural symbiosis and they throw new light on authors and texts both more and less familiar The subject areas discussed include religion history philosophy literature and education The age of Renaissance and Reformation is the central focus but earlier and later periods are also featured The contributions comprise a Festschrift for Professor Arjo Vanderjagt whose work deals centrally with both Christianity and Humanism Contributors are Fokke Akkerman István P Bejczy Alexander Broadie Christoph Burger Marcia L Colish Albrecht Diem Stephen Gersh Berndt Hamm Volker Honemann Adrie van der Laan Alasdair A MacDonald Peter Mack Zweder von Martels Matthieu van der Meer Hans Mooij Simone Mooij Valk Just Niemeijer John North Willemien Otten Jan Papy Detlev Pätzold Rob Pauls Marc van der Poel Burcht Pranger Peter Raedts Han van Ruler Rudolf Suntrup Jan R Veenstra and Ronald Witt **Great Muslim Mathematicians** Mohaini Mohamed, 2000 This book presents detailed accounts and analysis of the lives and world view of selected mathematicians of the Islamic period their place in the world of science the popularization of their lives and their contributions specifically in mathematics and astronomy **The Arithmetic of Al-Uqlidisi** A.S. Saidan, 2012-12-06 The purpose of presenting this book to the scholarly world is twofold In the first place I wish to provide for the English reader a translation of the earliest extant Arabic work of Hindi arithmetic It shows this system at its earliest stages and the first steps in its development a subject not yet well known except for readers of some Arabic publications by the present writer This book is therefore of particular importance for students of the history of mathematical techniques The medieval author Al Uqlidisi was it seems not noticed by bibliographers neither was his work which lay hardly noticed by modern scholars until 1960 when I happened to see a microfilm copy of it in the Institute of Arabic Manuscripts in Cairo A steady labour immediately followed to make a comparative study of the text together with over twenty other texts some of them not yet known to scholars This pursuit resulted in i a doctoral degree awarded to me in 1966 by the University of Khartoum ii the publication of several texts in Arabic including the text here translated and iii the publication of several articles in Arabic and English on the history of arithmetic in the Middle Ages The second purpose of this book is to make the main results of my study available to the English reader **The Muslim Contribution to Mathematics** Ali Abdullah Al-Daffa', 2020-09-10 This book first published in 1977 discusses the Muslim contribution to mathematics during the golden age of Muslim learning from the seventh to the thirteenth century It was during this period that Muslim culture exerted powerful economic political and religious influence over a large part of the civilised world The work of the Muslim scholars was by no means limited to religion business and government They researched and extended the theoretical and applied science of the Greeks and Romans of an earlier era in

ways that preserved and strengthened man's knowledge in these important fields. Although the main object of this book is to trace the history of the Muslim contribution to mathematics during the European Dark Ages, some effort is made to explain the progress of mathematical thought and its effects upon present-day culture. Certain Muslim mathematicians are mentioned because of the important nature of their ideas in the evolution of mathematical thinking during this earlier era. Muslim mathematicians invented the present arithmetical decimal system and the fundamental operations connected with it: addition, subtraction, multiplication, division, raising to a power and extracting the square root and the cubic root. They also introduced the zero symbol to Western culture, which simplified considerably the entire arithmetical system and its fundamental operations. It is no exaggeration if it is said that this specific invention marks the turning point in the development of mathematics into a science.

*Dodonaeus in Japan* Willy vande Walle, Kazuhiko Kasaya, 2001. This collection of essays is the outcome of an international symposium jointly organised by the International Research Center for Japanese Studies, Kyoto and the Section of Japanese Studies of the Katholieke Universiteit Leuven in October 1998. It was the second in a series of three international symposia that the International Research Center for Japanese Studies organised in Europe in conjunction with a European partner. The Leuven Symposium, which went under the general title of Translations of Culture, Culture of Translation, actually consisted of two parallel sessions. The first one was a workshop on Gender and Modernity in Japan. The second one was devoted to a reflection on Translation and Adaptation in the Formulation of Modern Episteme: A Reappraisal of Dodoens. The essays in the present volume are the reworked and elaborated versions of the presentations made at the latter symposium. It was clear that many of the issues one had to tackle had to do with translation and that translation was not a phenomenon limited to Japan but equally prominent in European cultural history, nor limited to texts as such but involving broader cultural contexts as well. The result was an investigation of Dodoens's *Dodonaeus* importance in Europe as well as in Japan through the prism of translation, transposition, adaptation, etc., defined as a moving force in cultural and social development and an indispensable lubricant in the process of functional differentiation. The main concern was evidently Japan, but the organisers deliberately opted for a perspective that kept a certain distance from boundaries. Therefore, experts in the field of Western herbals and botany were confronted with historians of early modern Japan.

**Divine Art, Infernal Machine** Elizabeth L. Eisenstein, 2011-01-21. There is a longstanding confusion of Johann Fust, Gutenberg's one-time business partner with the notorious Doctor Faustus. The association is not surprising to Elizabeth L. Eisenstein, for from its very early days the printing press was viewed by some as black magic. For the most part, however, it was welcomed as a divine art by Western churchmen and statesmen. Sixteenth-century Lutherans hailed it for emancipating Germans from papal rule, and seventeenth-century English radicals viewed it as a weapon against bishops and kings. While an early colonial governor of Virginia thanked God for the absence of printing in his colony, a century later revolutionaries on both sides of the Atlantic paid tribute to Gutenberg for setting in motion an irreversible movement that undermined the rule of priests and kings. Yet

scholars continued to praise printing as a peaceful art. They celebrated the advancement of learning while expressing concern about information overload. In *Divine Art, Infernal Machine*, Eisenstein, author of the hugely influential *The Printing Press as an Agent of Change*, has written a magisterial and highly readable account of five centuries of ambivalent attitudes toward printing and printers. Once again she makes a compelling case for the ways in which technological developments and cultural shifts are intimately related. Always keeping an eye on the present, she recalls how in the nineteenth century the steam press was seen both as a giant engine of progress and as signaling the end of a golden age. Predictions that the newspaper would supersede the book proved to be false, and Eisenstein is equally skeptical of pronouncements of the supersession of print by the digital. The use of print has always entailed ambivalence about serving the muses as opposed to profiting from the marketing of commodities. Somewhat newer is the tension between the perceived need to preserve an ever increasing mass of texts against the very real space and resource constraints of bricks and mortar libraries. Whatever the multimedia future may hold, Eisenstein notes, our attitudes toward print will never be monolithic. For now, however, reports of its death are greatly exaggerated.
