Writing in a clear and lively style, Jacob Smith looks at these media technologies and industries through the lens of performance, bringing to light a fascinating nexus of performer, technology, and audience. Combining theories of film sound, cultural histories of sound technologies and industries, and theories of performance, Smith convincingly connects disparate and largely neglected performance niches to explore the development of a modern vocal performance. **Vocal Tracks: Performance and Sound Media** demonstrates the voice to be a vehicle of performance identity and culture and illustrates both the interconnection of all these categories and their relation to the media technologies of the past century. **Designing Sound** Andy Farnell, 2010-08-20 A practitioner's guide to the basic principles of creating sound effects using easily accessed free software. **Designing Sound** teaches students and professional sound designers to understand and create sound effects starting from nothing. Its thesis is that any sound can be generated from first principles guided by analysis and synthesis. The text takes a practitioner's perspective, exploring the basic principles of making ordinary everyday sounds using an easily accessed free software. Readers use the Pure Data/Pd language to construct sound objects which are more flexible and useful than recordings. Sound is considered as a process rather than as data, an approach sometimes known as procedural audio. Procedural sound is a living sound effect that can run as computer code and be changed in real time according to unpredictable events. Applications include video games, film, animation, and media in which sound is part of an interactive process. The book takes a practical, systematic approach to the subject, teaching by example and providing background information that offers a firm theoretical context for its pragmatic stance. Many of the examples follow a pattern beginning with a discussion of the nature and physics of a sound proceeding through the development of models and the implementation of examples to the final step of producing a Pure Data program for the desired sound. Different synthesis methods are discussed, analyzed, and refined throughout. After mastering the techniques presented in **Designing Sound**, students will be able to build their own sound objects for use in interactive applications and other projects. **Voice and Vision** Mick Hurbis-Cherrier, 2012-11-12 **Voice Vision** is a comprehensive manual for the independent filmmakers and film students who want a solid grounding in the tools, techniques, and processes

of narrative film in order to achieve their artistic vision This book includes essential and detailed information on relevant film and digital video tools a thorough overview of the filmmaking stages and the aesthetic considerations for telling a visual story The ultimate goal of this book is to help you develop your creative voice while acquiring the solid practical skills and confidence to use it Unlike many books that privilege raw technical information or the line producing aspects of production Voice Vision places creativity visual expression and cinematic ideas front and center After all every practical decision a filmmaker makes like choosing a location an actor a film stock a focal length a lighting set up an edit point or a sound effect is also an expressive one and should serve the filmmaker s vision Every decision from the largest conceptual choices to the smallest practical solutions has a profound impact on what appears on the screen and how it moves an audience In Practice sidebars throughout connect conceptual aesthetic and technical issues to their application in the real world Some provide a brief analysis of a scene or technique from easily rentable films which illustrate how a specific technology or process is used to support a conceptual narrative or aesthetic choice Others recount common production challenges encountered on real student and professional shoots which will inspire you to be innovative and resourceful when you are solving your own filmmaking challenges
