Computer-Aided Reasoning Matt Kaufmann,Panagiotis Manolios,J Strother Moore,2013-04-17 Computer Aided Reasoning ACL2 Case Studies illustrates how the computer aided reasoning system ACL2 can be used in productive and innovative ways to design build and maintain hardware and software systems Included here are technical papers written by

twenty one contributors that report on self contained case studies some of which are sanitized industrial projects The papers deal with a wide variety of ideas including floating point arithmetic microprocessor simulation model checking symbolic trajectory evaluation compilation proof checking real analysis and several others Computer Aided Reasoning ACL2 Case Studies is meant for two audiences those looking for innovative ways to design build and maintain hardware and software systems faster and more reliably and those wishing to learn how to do this The former audience includes project managers and students in survey oriented courses The latter audience includes students and professionals pursuing rigorous approaches to hardware and software engineering or formal methods Computer Aided Reasoning ACL2 Case Studies can be used in graduate and upper division undergraduate courses on Software Engineering Formal Methods Hardware Design Theory of Computation Artificial Intelligence and Automated Reasoning The book is divided into two parts Part I begins with a discussion of the effort involved in using ACL2 It also contains a brief introduction to the ACL2 logic and its mechanization which is intended to give the reader sufficient background to read the case studies A more thorough textbook introduction to ACL2 may be found in the companion book Computer Aided Reasoning An Approach The heart of the book is Part II where the case studies are presented The case studies contain exercises whose solutions are on the Web In addition the complete ACL2 scripts necessary to formalize the models and prove all the properties discussed are on the Web For example when we say that one of the case studies formalizes a floating point multiplier and proves it correct we mean that not only can you read an English description of the model and how it was proved correct but you can obtain the entire formal content of the project and replay the proofs if you wish with your copy of ACL2 ACL2 may be obtained from its home page The results reported in each case study as ACL2 input scripts as well as exercise solutions for both books are available from this page

The Conscious Stream Denise Ingebo-Barth, 2000-12-01 The Conscious Stream describes a theory built on the idea that consciousness a stream of separate conscious instants like frames making up a reel of film is formed as trajectories circulate around the nervous system circuitry In this model a trajectory is a series of neuron groups energized in turn Picture it as a sequence of lights flashing around a marquee or perhaps as a comet blazing through a linked series of packed neuron groups through circuits of the nervous system When a trajectory passes through the thalamus a central area of the brain an instant of experience is inserted into our lifelong conscious stream This instant of experience can be a sensation thought or feeling The particular instant depends on the source of the trajectory When a trajectory is initiated by sound waves to the ear and passes through the thalamus for example a sensation in this case a sound enters the conscious stream As the description of this model progresses we see how a trajectory from the thalamus to the cortex is recorded and becomes a part of a network of records and how when concurrent trajectories in the cortical network converge and generate a trajectory back to the thalamus a thought enters the conscious stream In addition as trajectories evolve being repeated prolonged released or compounded emotional feelings enter the conscious stream Over time patterns of invigoration and relaxation stagnation and

relief are generated forming our life's emotional quality Finally the model shows how links of activity form a cycle and how a pattern of cycles forms an activity Patterns of activities in turn form a lifestyle In this model then the character of circulation in the nervous system reflects emotional fitness Although designed primarily for students of neuroscience this proposed model may also be evaluated by those having an interest in the physical processes underlying emotional fitness
