The technique is now more popular worldwide, prompting the development of this updated second edition which now includes a section devoted entirely to nail dermoscopy and also covers many hair disorders that were not previously discussed. Topics covered include alopecias, hair shaft disorders, hair root evaluation, pediatric hair disorders, hair weathering, inflammatory scalp disorders, infections, dermoscopy of the black scalp, body hair disorders and dermoscopy guided biopsies. Also covered is dermoscopy of the nail plate, the proximal nail fold, the hyponychium and the distal edge of the nail plate. The book discusses inflammatory nail disorders, traumatic nail disorders, onychomycosis, melanonychia and nail tumors. This essential new edition facilitates diagnosis of hair disorders and provides clinicians with important clues about disease stage and progression. *The Hair Fibre: Proteins, Structure and Development* Jeffrey E. Plowman, Duane P. Harland, Santanu Deb-Choudhury, 2018-05-24 Hair is a sophisticated bio-based material, whether it is on a human head or part of a mammalian coat. In particular, the role of the proteins in the follicle, integral to hair development, are not well understood. This new book seeks to integrate the latest research in proteomic and morphological studies into a coherent description of fibre development from the follicle to its final

mature keratinized form To achieve this the book has been divided into three sections The first describes the keratins their associated proteins and how they assemble into intermediate filaments in the fibre The second covers the latest information on the morphological changes that occur from the base of the follicle through the keratinization process to the mature fibre and the role that proteins play in this The final section delves into fundamental fibre properties such as crosslinking thermal and oxidative modifications and how these affect the mature fibre The editors of this book are internationally recognised for their work in the area of mammalian hair Jeffrey Plowman for his knowledge of the proteomics of the fibre Santanu Deb Choudhury for his work in the area of crosslinking in the fibre and Duane Harland for his understanding of the morphological development of the fibre Together they have collected material from other international experts Leopold Eckhart and Florian Ehrlich for their knowledge of the evolution of keratins Dong Dong Wu and David Irwin for their studies on keratin associated protein evolution David Parry and Bruce Fraser for their work on keratin and keratin associated protein structure and assembly John McKinnon for his studies on macrofibril formation Crisan Popescu for the thermodynamics of keratins and Jolon Dyer for his oxidative modification studies of keratins This book provides a comprehensive introduction and useful reference guide to hair biology and will be of interest to both scientists and technologists *The Art of Preserving the Hair;*
