The New Outline Of Science:

Science for All Peter J. Bowler, 2009-10-15 Recent scholarship has revealed that pioneering Victorian scientists endeavored through voluminous writing to raise public interest in science and its implications But it has generally been assumed that once science became a profession around the turn of the century this new generation of scientists turned its collective back on public outreach Science for All debunks this apocryphal notion Peter J Bowler surveys the books serial works magazines and newspapers published between 1900 and the outbreak of World War II to show that practicing scientists were very active in writing about their work for a general readership Science for All argues that the social environment of early twentieth century Britain created a substantial market for science books and magazines aimed at those who had benefited from better secondary education but could not access higher learning Scientists found it easy and profitable to write for this audience Bowler reveals and because their work was seen as educational they faced no hostility from their peers But when admission to colleges and universities became more accessible in the 1960s this market diminished and professional scientists began to lose interest in writing at the nonspecialist level Eagerly anticipated by scholars of scientific engagement throughout the ages Science for All sheds light on our own era and the continuing tension between science and public understanding

The Bookman ,1923 **The Sociology of Structural Disaster** Miwao Matsumoto, 2021-03-29 How and why did credible scientists engineers government officials journalists and others collectively give rise to a drastic failure to control the threat to the population of the Fukushima disaster Why was there no effort on the part of inter organizational networks well coordinated in the nuclear village to prevent the risks from turning into a disaster This book answers these questions by formulating the concept of structural disaster afresh First the book presents the path dependent development of structural disaster through a sociological reformulation of path dependent mechanisms not only in the context of nuclear energy but also in the context of renewable energy Secondly it traces the origins of structural disaster to a secret accident involving standardized military technology immediately before World War II and opportunistic utilization of the Great Kanto Earthquake of 1923 thus reconstructing the development of structural disaster within a long term historical perspective Maintaining distance from conflicts of interest and cultural essentialisms this book highlights configurations and mechanisms of structural disasters that are far more persistent more universal but less visible and that have turned risk into suffering The book seeks to cast light on an important new horizon of the science technology society interface in the sociology of science and technology science and technology studies the sociology of disaster the social history of the military industrial university complex and beyond

Rethinking Scholarly Communication in China Liu Zhongbo, 2024-09-02. This book examines science and technology policies in China over time and explores the development of scholarly communication through the lens of the political economy of communication. Despite political censorship and restrictions on the production of academic knowledge in China, the number of scholarly publications has skyrocketed over the past 20 years. By explaining these seemingly contradictory phenomena, this study provides insight into the complex landscape of scholarly communication in China, shaped by the government in collaboration with commercial publishers. The book examines the dynamic relationship between the state and the market, including their key players, which determines the production and dissemination of academic knowledge. From a political economy perspective, it investigates how the academic governance complex—a system that intertwines communication, politics, and economics—has been established in China. It then discusses the impact of this system on the production of academic knowledge in the country. The title will serve as a key reference for academics, researchers, and students interested in the intersection of communication studies, librarianship, and political science, particularly those focusing on China's academic knowledge production and scholarly communication.
