Sherony,Randi Minetor,2024-02-07 From the discovery of the fossil *Archaeopteryx* to more than 10 000 different documented species today birds have become the second most diversified class of vertebrates on Earth Birds have evolved extensively since they first emerged in prehistoric times but that diversity could dwindle and even vanish unless we take steps to conserve their habitats ensuring that they sustain their numbers and their variety This natural history of birds starts in the distant past going back to the Jurassic Cretaceous and Paleogene periods in order to get a broader understanding of the birds that we see today Chapters cover their lives breeding flight migration and more while also highlighting some especially unique bird fossils such as the *Pelagornis Sandersi* which had a wingspan of more than 20 feet Also included are chapters on the loss of needed habitats the current decline of native birds and what can be done to reverse it      **Video Surveillance of Nesting Birds** Christine Ann Ribic,2012-05-13 Until recently inferring identities of predators and monitoring cryptic behaviors at the nest was time consuming often with anecdotal results No more Video nest surveillance so aptly revealed in this volume has ushered in a new era of data collection that allows field workers to link environmental factors with such aspects as the temporal dynamics of predator communities in relation to what the birds are doing at their nests thus removing much of the guesswork of earlier studies Spencer G Sealy University of Manitoba *Video Surveillance of Nesting Birds* shatters earlier beliefs about how birds interact with nest predators Much of what we thought we knew about nesting and its hazards was flat out wrong as authors in this book discovered by using modern technology in the field As simple as we would like our models of animal behavior to be this book shows that reality is far more complex and nuanced Douglas H Johnson University of Minnesota      **Handbook of Sleep Research** ,2019-06-21 *Handbook of Sleep Research* Volume 30 provides a comprehensive review of the current status of the neuroscience of sleep research It begins with an overview of the neural hormonal and genetic mechanisms of sleep and

wake regulation before outlining the various proposed functions of sleep and the role it plays in plasticity and in learning and memory Finally the book discusses disorders of sleep and waking covering both lifestyle factors that cause disrupted sleep and psychiatric and neurological conditions that contribute to disorders Emphasizes a comparative and multidisciplinary approach to the topic of sleep Covers the neurobiology and physiology of sleep stages mechanisms of waking and dreaming Discusses in detail the proposed functions of sleep from health and rest to memory consolidation and synaptic plasticity Examines the current state of research in mammalian and non mammalian species ranging from primates to invertebrates
