

The background of the cover is a photograph of a winter landscape. In the foreground, a large, irregular, and textured red stain, resembling a bloodstain, is spread across the snow. The stain is darker red in some areas and lighter in others, with some internal detail suggesting a liquid spill. In the middle ground, there are several evergreen trees covered in snow. In the background, a range of mountains is visible, with the peaks partially covered in snow and some rocky areas exposed. The sky is a pale, overcast blue.

Löwenberg, 2012-12-06 Cytokines are cellular growth factors which also provide communication between cells and their milieu This clearly is an exciting area in modern medicine that will have significant impact on various facets of transfusion Erythropoietin therapy stimulates red cell production while thrombopoietin seems to positively affect megakaryopoiesis and can be an added armamentarium for the thrombocytopenic patient Using haematopoietic growth factors stem cells could be mobilized early to the peripheral blood for collection and subsequent transplantation into haemato oncology patients instead of bone marrow transplantation Using a cocktail of cytokines in cell culture stem cells could be expanded and selected for therapy Cytokines and growth factors can even be modified which may lead to successful gene therapy in malignancies including solid tumour vaccines However the presence of cytokines in certain blood products could have biological effects

following transfusion although its clinical relevance needs to be ascertained There is much potential for the use of cytokines in the treatment of infections Early diagnostic methods are now available to monitor their levels and relevance It is likely that cytokines will increasingly play a role in therapy and could develop our fundamental knowledge about the development of T cells An ethical dilemma remains however regarding the use of cytokines in healthy donors for harvesting suitable specific cells Longer clinical observation will be necessary to gather the necessary information Cytokines and growth factors in blood transfusion was the theme of the 21st International Symposium in Blood Transfusion where twenty clinicians and scientists experts in their own fields were invited to update the above information Their findings are presented in four sections in this volume Fundamental aspects cytokines in development of T cells growth factors in haematopoiesis growth factor receptors and signal transduction cytokine response in platelet and whole blood transfusions Function production and diagnosis laboratory diagnostics of cytokines and growth factors cytokines in blood components cytokines and growth factors in cell expansions cytokines for genetic modification towards gene therapy progenitor cells from healthy donors Application in clinical medicine clinical relevance of cytokines in transfusion products cytokines and growth factors in solid tumours gene therapy in malignancies vaccine strategies inducing T cell immunity against tumours cytokines in the treatment of infections thrombopoietin and megakaryopoiesis Future potential use in transfusion medicine erythropoietin immunotherapy ethical aspects of the use of cytokines and growth factors in donors potential of cytokines and growth factors in transfusion medicine

Blood Iosifina Foskolou, Martin Jones, 2022-07-07 Blood is life its complex composition is finely attuned to our vital needs and functions Blood can also signify death while bloody is a curse Arising from the 2021 Darwin College Lectures this volume invites leading thinkers on the subject to explore the many meanings of blood across a diverse range of disciplines Through the eyes of artist Marc Quinn the paradoxical nature of blood plays with the notion of self Through those of geneticist Walter Bodmer it becomes a scientific reality bloodlines and diaspora capture our notions of community The transfer of blood between bodies as Rose George relates can save lives or as we learn from Claire Roddie can cure cancer

Tim Pedley and Stuart Egginton explore the extraordinary complexity of blood as a critical biological fluid Sarah Read examines the intimate connection between blood and womanhood as Carol Senf does in her consideration of Bram Stoker's novel *Dracula*
