The Apparatus Of Science At Harvard 1765 18:

Science at Harvard University Clark A. Elliott, Margaret W. Rossiter, 1992-02 This collection of original historical essays examines aspects of the relationship between science and the nation's oldest academic institution This is history as viewed from the varying perspectives of a group of scholars for whom science at Harvard University is a significant component of their ongoing research Thus the essays are of specialist interest while collectively the volume is a case study of science in an institutional setting In conducting their research the authors have used a wealth of primary sources from the Harvard Archives and other repositories The volume opens with a thematic introduction by Margaret Rossiter reflecting the picture of Harvard science drawn in the several papers in the volume while suggesting ways in which a study of Harvard relates to and illuminates the history of science in America The subsequent papers follow a generally chronological sequence beginning with Sara Schechner Genuth's study of attitudes toward comets in relation to early Harvard University programs and functions Mary Ann James examines the beginnings of applied science at Harvard and Bruce Sinclair continues that theme with a comparative study of MIT and Harvard Toby Appel's paper on zoologist Jeffries Wyman identifies the special part that personal character plays in institutional history Curtis Hinsley concentrates on facilities and shows how the Peabody Museum gave rise to teaching in anthropology David Livingstone's biographical treatment of Nathaniel S Shaler reveals a number of intellectual strands running through the University in the late nineteenth century and John Parascandola's paper on L J Henderson likewise deals with a figure of wide influence and many interests ranging from biochemistry to sociology The latter topic leads to Lawrence Nichols's account of the rise of sociology at Harvard A view of the internal tensions within psychology are seen in Rodney Triplet's study of Henry A Murray I Bernard Cohen examines the relations among Howard Aiken IBM and Harvard in the development of the Mark I computer while Peggy Kidwell studies the Observatory community during World War II and its response to national defense and a developing federal support system Finally Clark Elliott considers the history of Harvard science as a field for study through a review of published literature and archival sources and makes suggestions for further investigation BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved *Scientific Instruments, 1500-1900* Gerard L'Estrange Turner, 1998 The impulse to collect is universal Collections containing natural curiosities date from the 16th century and it was this type of collection in which scientific instruments found a home This book traces the historical origins and development of instruments as they spread across the globe explaining their manufacture use and adaptations 91 color and 20 b w plates *The Philosophy Chamber* Ethan W. Lasser, 2017-01-01 This publication accompanies the exhibition The Philosophy Chamber Art and Science in Harvard's Teaching Cabinet 1766 1820 on view at the Harvard Art Museums Cambridge Massachusetts from May 19 through December 31 2017 and at The Hunterian University of Glasgow Scotland in 2018 *Library of Congress Catalog* United States, 1977 **The Museums and Collections of Higher Education** Andrew Simpson, 2022-12-23 The Museums and

Collections of Higher Education provides an analysis of the historic connections between materiality and higher education developed through diverse examples of global practice Outlining the different value propositions that museums and collections bring to higher education the historic link between objects evidence and academic knowledge is examined with reference to the origin point of both types of organisation Museums and collections bring institutional reflection cross disciplinary bridges digital extension options and participatory potential Given the two primary sources of text and object a singular source type predisposes a knowledge system to epistemic stasis whereas mixed sources develop the potential for epistemic disruption and possible change Museums and collections therefore are essential in the academies of higher learning With the many challenges confronting humanity it is argued that connecting intellect with social action for societal change through university museums should be a contemporary manifestation of the social contract of universities Much has been written about museums and universities but there is little about university museums and collections This book will interest museum scholars and practitioners especially those unaware that university museums are at the forefront of museological creativity It will also be of interest to academics and the growing number of leaders and managers in the modern university

Adams of Fleet Street, Instrument Makers to King George III John R. Millburn, 2017-07-05 G Adams in Fleet Street London is the signature on some of the finest scientific instruments of the eighteenth century This book is the first comprehensive study of the instrument making business run by the Adams family from its foundation in 1734 to bankruptcy in 1817 It is based on detailed research in the archival sources as well as examination of extant instruments and publications by George Adams senior and his two sons George junior and Dudley Separate chapters are devoted to George senior s family background his royal connections and his new globes George junior s numerous publications and his dealings with van Marum and to Dudley s dabbling with medico electrical therapeutics The book is richly illustrated with plates from the Adams s own publications and with examples of instruments ranging from unique museum pieces such as the Prince of Wales microscope and globes to the more common even mundane items of the kind seen in salesrooms and dealers the surveying navigational and military instruments that formed the backbone of the business The appendices include facsimiles of trade catalogues and an annotated short title listing of the Adams family s publications which also covers American and Continental editions as well as the posthumous ones by W S Jones

Sympathetic Attractions Patricia Fara, 2014-07-14 In this interdisciplinary study of eighteenth century England Patricia Fara explores how natural philosophers constructed magnetism as a science appropriating the skills and knowledge of experienced navigators For people of this period magnetic phenomena

reverberated with the symbolism of occult mystery sexual attraction and universal sympathies in this maritime nation magnetic instruments such as navigational compasses heralded imperial expansion commercial gain and scientific progress By analyzing such multiple associations Fara reconstructs cultural interactions in the days just prior to the creation of disciplinary science Not only does this illustrated book provide a kaleidoscopic view of a changing society but it also portrays the emergence of public science Linking this rise in interest to the utility and mysteriousness of magnetism Fara organizes her discussion into themes including commercialization imperialism instruments and invention the role of language attitudes toward the past and the relationship between religion and natural philosophy Fara shows that natural philosophers proclaiming themselves as the only true experts on magnetism actively participated in massive transformations of English life In their bids for public recognition as elite specialists they engaged in controversies that resonated with religious economic moral gender and political implications These struggles for social and scientific authority in the eighteenth century provide the background for better understanding the cultural topography of modern society Originally published in 1996 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

The Wayward Comet Martin Beech, 2016-01-01 Comets have not only blazed across the celestial vault throughout human history they have embellished the night sky since the Earth itself formed some 4.5 billion years ago Comets were among the first born solid bodies in the solar system and their frozen nuclei tell of the primordial chemistry and chaos that ultimately resulted in the formation of the planets the evolution of life and us For all this however comets have long been celestial oddities they baffled our distant ancestors and human society continues to marvel and speculate wildly at their appearance even to the present day Cutting against the perceived constancy of the stars comets seemingly present themselves at random times and they are often interpreted as harbingers of terrestrial change both good and ill How then are we to tame the comet where do they form how do they move and can their appearances be predicted Such questions have preoccupied astronomers for centuries but comets have only gradually allowed the secrets of their wayward flight to be revealed In this book I explore the historical struggle to understand not only the place of comets within a societal context but also the scientific quest to make their paths amenable to mathematical certitude The latter narrative is the more technical in content but it took tactile form with the invention in 1732 of the cometarium a mechanical device to demonstrate the first two of Kepler's planetary laws And this development was later paralleled in the mid to late 19th century by the development of various mechanical devices analog computers to help obtain solutions to Kepler's Problem the problem which asks exactly where in its orbit is a given comet at some specific set time The telling of the wayward comets story

covers the past two millennia of human history and it takes us from the phenomenological musings of Aristotle through the exactitude of Newton's gravitational theory and calculus to the truly incredible study of comet 67P Churyumov Gerasimenko by the European Space Agency's Rosetta spacecraft in the modern era

Fire in the Sky Roberta J. M. Olson, Jay M. Pasachoff, 1999-11-13 Comets and meteors are spectacular and awe inspiring natural phenomena which are among nature's most compelling icons Since the beginning of recorded time they have mesmerized people not least among them artists and astronomers Britain during the eighteenth and nineteenth centuries produced a larger number and greater variety of representations of comets and meteors than any other country The development of new technologies and the burgeoning interest of the general public in science and art dovetailed with the inherent British interest in nature and a strong literary tradition of comet and meteor symbolism This beautifully illustrated book examines the link between these works and the achievements of British science in the wake of Newton and Halley This book will be stimulating to anyone interested in the art or astronomy of comets

Weighing the World Russell McCormmach, 2011-12-08 The book about John Michell 1724-93 has two parts The first and longest part is biographical an account of Michell's home setting Nottinghamshire in England the clerical world in which he grew up Church of England the university Cambridge where he studied and taught and the scientific activities he made the center of his life The second part is a complete edition of his known letters Half of his letters have not been previously published the other half are brought together in one place for the first time The letters touch on all aspects of his career and because they are in his words they help bring the subject to life His publications were not many a slim book on magnets and magnetism one paper on geology two papers on astronomy and a few brief papers on other topics but they were enough to leave a mark on several sciences He has been called a geologist an astronomer and a physicist which he was though we best remember him as a natural philosopher as one who investigated physical nature broadly His scientific contribution is not easy to summarize Arguably he had the broadest competence of any British natural philosopher of the eighteenth century equally skilled in experiment and observation mathematical theory and instruments his field of inquiry was the universe From the structure of the heavens through the structure of the Earth to the forces of the elementary particles of matter he carried out original and far reaching researches on the workings of nature

Manufacturing David O. Whitten, Bessie E. Whitten, 1990-09-27 Overall this first volume in the series should render business research in manufacturing a good deal easier by bringing together insightful industry histories and detailed critical bibliographies This series has much to recommend it Future volumes will be eagerly awaited Reference Books Bulletin This historical and bibliographical reference work is the first volume of Greenwood Press's Handbook of American Business

History a series intended to supplement current bibliographic materials pertaining to business history Devoted to manufacturing this work uses the Enterprise Standard Industrial Classification ESIC to divide the subject into distinct segments from which contributors have developed histories and bibliographies of the different types of manufacturing Though authors were given sets of guidelines to follow they were also allowed the flexibility to work in a format that best suited the material Each contribution in this volume contains three important elements a concise history of the manufacturing sector a bibliographic essay and a bibliography Some contributions appear in three distinct parts while others are combined into one or two segments all build on currently available material for students and scholars doing research on business and industry The contributors who include business economic and social historians as well as engineers and lawyers have covered such topics as bakery products industrial chemicals and synthetics engines and turbines and household appliances Also included are an introductory essay that covers general works and a comprehensive index This book should be a useful tool for courses in business and industry and a valuable resource for college university and public libraries Bolt Of Fate Tom Tucker,2005-03-16 Was Benjamin Franklin s famous electric kite experiment a fraud And did it determine the course of the American Revolution **Occasional Papers** University of Illinois at Urbana-Champaign.
