As technologists we are constantly exploring and pushing the limits of our own disciplines and we accept the notion that the efficiencies of new technologies are advancing at a very rapid rate However we rarely have time to contemplate the broader impact of these technologies as they impact and amplify adjacent technology disciplines This book therefore focuses on the potential impact of those technologies but it is not intended as a technical manuscript In this book we consider our progress and current position %toward on arbitrary popular concepts of future scenarios rather than the typical measurements of cycles per second or milliwatts We compare our current human cultural situation to other past historic events as we anticipate the future social impact of rapidly accelerating technologies We also rely on measurements based on specific events highlighting the breadth of the impact of accelerating semiconductor technologies rather than the specific rate of advance of any particular semiconductor technology These measurements certainly lack the mathematic precision and repeatability to which technologists are accustomed but the material that we are dealing with the social objectives and future political structures of humanity does not permit a high degree of mathematic accuracy Our conclusion draws from the concept of Singularity It seems certain that at the rate at which our technologies are advancing we will exceed the ability of our post Industrial Revolution structures to absorb these new challenges and we cannot accurately anticipate what those

future social structures will resemble *The False Promises of the Digital Revolution* C. A. Bowers, 2014 The False Promises of the Digital Revolution examines what currently goes largely unnoticed because of the many important uses of digital technologies While many people interpret digital technologies as accelerating the global rate of progress C A Bowers focuses attention on how they reinforce the deep and ecologically problematic cultural assumptions of the West the myth of progress the substitution of data for different cultural traditions of wisdom the connections between print and abstract thinking the myth of individual autonomy the conduit view of language that hides how words metaphors reproduce earlier misconceptions and a Social Darwinian justification for colonizing other cultures that is now leading to armed resistance which in turn strengthens the ties between corporations the military and the computer science industry The book also investigates how to understand the cultural non neutrality of digital technologies how print and the emphasis on data undermine awareness of the tacit information pathways between cultural and natural ecologies and how to identify educational reforms that will contribute to a more informed public about the uses of digital technologies *The Digital Revolution and the Coming of the Postmodern University* Carl A.
