

Drop-Out Fuse

- Drop-out fuses, also known as expulsion fuses, are vital for safeguarding electrical distribution systems from overcurrent and short-circuits
- They function by breaking the circuit when current exceeds a set threshold, reacting both to overcurrent and rapid temperature changes
- Comprising a fuse element, tube, and carrier, they're primarily used in power lines and transformers
- Though cost-effective and reliable, they might be slower than other protective devices and need replacement after a fault
