How the Neolithics Influenced Rock 'n' Roll Andrew Johnstone,2010-10-13 This book sets out to explore the connections between megalithic monuments and Rock n Roll music by first addressing what the megalithic structures would have originally meant to the builders and users of these sites and at the statements they were making at that time It then looks at how Rock n Roll artists have incorporated images of these monuments into album cover designs by looking at specific examples in an attempt to understand why despite being separated by millennia from the original builders they chose to use such places to represent the statements they are making through their music in the late 20th and early 21st centuries

Stone Circles of

Britain John Barnatt,1989 **Experimental Archaeology and Neolithic Architecture** John Hill,2024-03-04 Our understanding of the construction processes involved with British Neolithic architecture needs further investigation The people were preliterate and there is no archaeological evidence of written or pictorial information regarding construction So how could they build complex monuments like Stonehenge without a plan This book argues that the Neolithic builders used rudimentary techniques to plan before building their monuments circa 4000 2500 BC essentially using ropes to set out the physical design of any structure they intended to build whilst finger reckoning numeracy dictated how their measured ropes were folded to position the monument s features Finally they used the sun s shadow at midday to achieve orientation To support this premise the book offers both the results of the author s rope experiments and instructions for repeating them Importantly this form of experimental archaeology delivers a unique approach for understanding the nature of complex Neolithic architecture Essentially the book explains the mental processes involved between design and construction

Jones,2024-12-12 A report of recent excavation of five Early Bronze Age barrows undertaken by Cornwall Archaeological Unit All are complex monuments revealing episodes of remodelling and reuse Despite being broadly comparable with similar radiocarbon determinations there are major differences in both the form and intensity of activity between the barrows *The Significance of Monuments* Richard Bradley,2012-12-06 The Neolithic period when agriculture began and many monuments including Stonehenge were constructed is an era fraught with paradoxes and ambiguities Starting in the Mesolithic and carrying his analysis through to the Late Bronze Age Richard Bradley sheds light on this complex period and the changing consciousness of these prehistoric peoples *The Significance of Monuments* studies the importance of monuments tracing their history from their first creation over six thousand years later Part One discusses how monuments first developed and their role in developing a new sense of time and space among the inhabitants of prehistoric Europe Other features of the prehistoric landscape such as mounds and enclosures across Continental Europe are also examined Part Two studies how such monuments were modified and reinterpreted to suit the changing needs of society through a series of detailed case studies *The Significance of Monuments* is an indispensable text for all students of European prehistory It is also an enlightening read for professional archaeologists and all those interested in this fascinating period **An Upland Biography** John Barnatt,Bill Bevan,Mark

Johnston, 2020-10-26 *Bronze Age Worlds* brings a new way of thinking about kinship to the task of explaining the formation of social life in Bronze Age Britain and Ireland. Britain and Ireland's diverse landscapes and societies experienced varied and profound transformations during the twenty-fifth to eighth centuries BC. People's lives were shaped by migrations, changing beliefs about death, making and thinking with metals, and living in houses and field systems. This book offers accounts of how these processes emerged from social life from events, places, and landscapes informed by a novel theory of kinship. Kinship was a rich and inventive sphere of culture that incorporated biological relations but was not determined by them. Kinship formed personhood and collective belonging and associated people with nonhuman beings, things, and places. The differences in kinship and kinwork across Ireland and Britain brought textures to social life and the formation of Bronze Age worlds. *Bronze Age Worlds* offers new perspectives to archaeologists and anthropologists interested in the place of kinship in Bronze Age societies and cultural development.
