The Analogical Mind Perspectives From Cognitive Science:

The Analogical Mind Dedre Gentner, Keith J. Holyoak, Boicho N. Kokinov, 2001-03-02 Analogy has been the focus of extensive research in cognitive science over the past two decades Through analogy novel situations and problems can be understood in terms of familiar ones Indeed a case can be made for analogical processing as the very core of cognition This is the first book to span the full range of disciplines concerned with analogy Its contributors represent cognitive developmental and comparative psychology neuroscience artificial intelligence linguistics and philosophy The book is divided into three parts The first part describes computational models of analogy as well as their relation to computational models of other cognitive processes The second part addresses the role of analogy in a wide range of cognitive tasks such as forming complex cognitive structures conveying emotion making decisions and solving problems The third part looks at the development of analogy in children and the possible use of analogy in nonhuman primates Contributors Miriam Bassok Consuelo B Boronat Brian Bowdle Fintan Costello Kevin Dunbar Gilles Fauconnier Kenneth D Forbus Dedre Gentner Usha Goswami Brett Gray Graeme S Halford Douglas Hofstadter Keith J Holyoak John E Hummel Mark T Keane Boicho N Kokinov Arthur B Markman C Page Moreau David L Oden Alexander A Petrov Steven Phillips David Premack Cameron Shelley Paul Thagard Roger K R Thompson William H Wilson Phillip Wolff **The Analogical Mind** Dedre Gentner, Keith James Holyoak, Boicho N.

Kokinov, 2001 *The Oxford Handbook of Cognitive Psychology* Daniel Reisberg, 2013-04-04 This handbook is an essential comprehensive resource for students and academics interested in topics in cognitive psychology including perceptual issues attention memory knowledge representation language emotional influences judgment problem solving and the study of individual differences in cognition *ICCM 2012 Proceedings*, *Proceedings of the Twenty-fourth Annual Conference of the Cognitive Science Society* Wayne D. Gray, Christian D. Schunn, 2019-04-24 This volume features the complete text of the material presented at the Twenty Fourth Annual Conference of the Cognitive Science Society As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science The volume includes all papers posters and summaries of symposia presented at this leading conference that brings cognitive scientists together The 2002 meeting dealt with issues of representing and modeling cognitive processes as they appeal to scholars in all subdisciplines that comprise cognitive science psychology computer science neuroscience linguistics and philosophy **The Wiley-Blackwell Handbook of**

Childhood Cognitive Development Usha Goswami, 2011-07-11 This definitive volume is the result of collaboration by top scholars in the field of children's cognition New edition offers an up to date overview of all the major areas of importance in the field and includes new data from cognitive neuroscience and new chapters on social cognitive development and language Provides state of the art summaries of current research by international specialists in different areas of cognitive development Spans aspects of cognitive development from infancy to the onset of adolescence Includes chapters on symbolic

Music-Dance Patrizia Veroli, Gianfranco Vinay, 2017-11-10 Music Dance explores the identity of choreomusical work its complex authorship and its modes of reception as well as the cognitive processes involved in the reception of dance performance Scholars of dance and music analyse the ways in which a musical score changes its prescriptive status when it becomes part of a choreographic project the encounter between sound and motion on stage and the intersection of listening and seeing As well as being of interest to musicologists and choreologists considering issues such as notation multimedia and the analysis of performance this volume will appeal to scholars interested in applied research in the fields of cognition and neuroscience The line up of authors comprises representative figures of today s choreomusicology dance historians scholars of twentieth century composition and specialists in cognitive science and performance studies Among the topics covered are multimedia and the analysis of performance the notational practice of choreographers and the parallel attempts of composers to find a graphic representation for musical gestures and the experience of dance as a paradigm for a multimodal perception which is investigated in terms of how the association of sound and movement triggers emotions and specific forms of cognition

The Single-Minded Animal Preston Stovall, 2021-09-15 This book provides an account of discursive or reason governed cognition by synthesizing research in the philosophy of language the philosophy of mind and evolutionary anthropology Using the grasp of a natural language as a model for the autonomous or self governed rationality of discursive cognition the author uses a semantics for individual intentions shared intentions and normative attitudes as a framework for understanding what it is to be a rational animal This semantics interprets claims about shared intentions and claims about what people ought and may do as the expression of plans of action that involve taking the points of view of other people within a community This has important consequences for our understanding of both the natural basis and the social relevance of intentional and normative mental states In order to distinguish the strong and weak modal force which characterizes normativity but not shared intentionality the author argues that a notion of single minded practical cognition is necessary This account of single mindedness is then used to shed light on the autonomy or self government characteristic of discursive cognition as manifest in a linguistic community whose members are able to adopt the standpoints of others Drawing together research in philosophy and the related sciences the formal account of the semantic content of the claims we use to give expression to shared intentional and normative mental states integrates well with research in cognitive science evolutionary anthropology and social psychology concerning the ontogenetic and phylogenetic development of shared intentionality and norm psychology in human beings and other primates The Single Minded Animal will appeal to researchers and advanced students working on shared intentionality normativity rationality cognitive science social and developmental psychology and evolutionary anthropology

Representational Change and the Use of Metaphors in Problem Solving Benjamin Angerer, 2023-07-07 This book addresses a longstanding impasse in problem solving research if structured mental

representations of problems are required for solving them how do those arise and if needed change The book argues that established theories underestimate this question due to methodological requirements Proposing to momentarily suspend these requirements including the focus on well defined puzzle tasks the book suggests to alternatively conduct exploratory studies with more complex open ended problems It presents a qualitative case study of participants working for several days on a mental paper folding task designed to challenge them to construct their own representations Charting their use of gestures metaphors and ever more complex descriptions it carefully traces the chronology of their thinking Combining in depth empirical investigation with theory building the book proposes a framework of problem solving that goes beyond established models accommodating associative motivational and affective factors This book will be of great interest to researchers academics and postgraduate students in the fields of cognitive science psychology philosophy of mind and cognition and cognitive artificial intelligence

Dangerous Frames Nicholas J. G. Winter, 2008-11-15 In addition to their obvious roles in American politics race and gender also work in hidden ways to profoundly influence the way we think and vote about a vast array of issues that don't seem related to either category As Nicholas Winter reveals in *Dangerous Frames* politicians and leaders often frame these seemingly unrelated issues in ways that prime audiences to respond not to the policy at hand but instead to the way its presentation resonates with their deeply held beliefs about race and gender Winter shows for example how official rhetoric about welfare and Social Security has tapped into white Americans racial biases to shape their opinions on both issues for the past two decades Similarly the way politicians presented health care reform in the 1990s divided Americans along the lines of their attitudes toward gender Combining cognitive and political psychology with innovative empirical research *Dangerous Frames* ultimately illuminates the emotional underpinnings of American politics

Digital Knowledge Maps in Education Dirk Ifenthaler, Ria Hanewald, 2013-11-01 Digital knowledge maps are at a glance visual representations that enable enriching imaginative and transformative ways for teaching and learning with the potential to enhance positive educational outcomes The use of such maps has generated much attention and interest among tertiary education practitioners and researchers over the last few years as higher education institutions around the world begin to invest heavily into new technologies designed to provide online spaces within which to build resources and conduct activities The key elements of this edited volume will comprise original and innovative contributions to existing scholarship in this field with examples of pedagogical possibilities as they are currently practiced across a range of contexts It will contain chapters that address theory research and practical issues related to the use of digital knowledge maps in all aspects of tertiary education and draws predominantly on international perspectives with a diverse group of invited contributors Reports on empirical studies as well as theoretical conceptual chapters that engage deeply with pertinent questions and issues raised from a pedagogical social cultural philosophical and or ethical standpoint are included Systematic literature reviews dealing with digital knowledge mapping in education are also an integral part of the volume

Integrating the

Mind Maxwell J. Roberts, 2008-03-10 There are currently several debates taking place simultaneously in various fields of psychology which address the same fundamental issue to what extent are the processes and resources that underlie higher cognition domain general versus domain specific Extreme Domain Specificity argues that people are effective thinkers only in contexts which they have directly experienced or in which evolution has equipped them with effective solutions The role of general cognitive abilities is ignored or denied altogether This book evaluates the evidence and arguments put forward in support of domain specific cognition at the expense of domain generality The contributions reflect a range of expertise and present research into logical reasoning problem solving judgement and decision making cognitive development and intelligence The contributors suggest that domain general processes are essential and that domain specific processes cannot function without them Rather than continuing to divide the mind's function into ever more specific units this book argues that psychologists should look for greater integration and for people's general cognitive skills to be viewed as an integral part of their lives Integrating the Mind will be valuable reading for students and researchers in psychology interested in the fields of cognition cognitive development intelligence and skilled behaviour **Translating Cain** Samantha Joo, 2020-12-10

Unless we recognize the cultural context embedded in the Genesis story of Cain and Abel the significance of Cain's rejection and consequent violence is often lost in translation While many interpreters highlight the theme of sibling rivalry to explain Cain's murderous violence Samantha Joo relates Cain's anger and shame to the social marginalization of Kenites in ancient Israel for whom Cain functions narratively as an ancestor To better understand and experience Cain's emotions in the narrative Joo provides a method for recontextualizing an ancient story in modern contexts Drawing from post colonial theories of Latin America translators Joo focuses on analogies which simulate the moveable event of a story She shows that novels like Fyodor Dostoevsky's Crime and Punishment and Richard Wright's Native Son in which protagonists kill to escape their invisibility capture the event of Cain and Abel Consequently readers can empathize with the anger and shame resulting from the social marginalization of Cain through the alienation of a poor ex university student Raskolnikov and the oppression of a young black man Bigger Thomas **Qualitative Representations** Kenneth D. Forbus, 2025-10-28

An argument that qualitative representations symbolic representations that carve continuous phenomena into meaningful units are central to human cognition In this book Kenneth Forbus proposes that qualitative representations hold the key to one of the deepest mysteries of cognitive science how we reason and learn about the continuous phenomena surrounding us Forbus argues that qualitative representations symbolic representations that carve continuous phenomena into meaningful units are central to human cognition Qualitative representations provide a basis for commonsense reasoning because they enable practical reasoning with very little data this makes qualitative representations a useful component of natural language semantics Qualitative representations also provide a foundation for expert reasoning in science and engineering by making explicit the broad categories of things that might happen and enabling causal models that help guide the application of more quantitative

knowledge as needed Qualitative representations are important for creating more human like artificial intelligence systems with capabilities for spatial reasoning vision question answering and understanding natural language Forbus discusses among other topics basic ideas of knowledge representation and reasoning qualitative process theory qualitative simulation and reasoning about change compositional modeling qualitative spatial reasoning and learning and conceptual change His argument is notable both for presenting an approach to qualitative reasoning in which analogical reasoning and learning play crucial roles and for marshaling a wide variety of evidence including the performance of AI systems Cognitive scientists will find Forbus s account of qualitative representations illuminating AI scientists will value Forbus s new approach to qualitative representations and the overview he offers *The Sparkle from the Coal* Barbara Howard,2024-10-31 Perhaps one of the least appreciated aspects of Rowan Williams is his theology of imagination Seeking to fill this gap this book explores the imaginative impulse operative in Rowan Williams theology and poetry which centres around the notion of divine desire and the way in which imagination can reveal possibility even in the bleakest of circumstances Drawing on his poetic work as well as his theological writing the book explores how Williams theology leads us to a fresh understanding of the ways in which the renewing and enabling energy of the Holy Spirit is ever active within and beyond the Church in enabling human imaginations to cooperate with the divine energy of love in bringing creation to fulfilment **Agency and Joint Attention** Janet Metcalfe,Herbert S. Terrace,2013-09-19 The puzzle that motivates Agency and Joint Attention is how people are able at one and the same time to maintain their own sense of autonomy taking responsibility for their own actions and distinguishing them from the actions of others while still being able to understand appreciate and coordinate their thoughts and actions with other people *Good Thinking* Denise D. Cummins,2012-04-16 Do you know what economists mean when they refer to you as a rational agent Or why a psychologist might label your idea a creative insight Or how a philosopher could be logical but also passionate in persuading you to obey moral imperatives Or why scientists disagree about the outcomes of experiments comparing drug treatments and disease risk factors After reading this book you will know how the best and brightest thinkers judge the ways we decide argue solve problems and tell right from wrong But you will also understand why when we don t meet these standards it is not always a bad thing The answers are rooted in the way the human brain has been wired over evolutionary time to make us kinder and more generous than economists think we ought to be and more resistant to change and persuasion than scientists and scholars think we ought to be **International Handbook of Thinking and Reasoning** Linden J. Ball,Valerie A. Thompson,2017-11-14 The Routledge International Handbook of Thinking and Reasoning is an authoritative reference work providing a balanced overview of current scholarship spanning the full breadth of the rapidly developing and expanding field of thinking and reasoning It contains 35 chapters written by leading international researchers covering foundational issues as well as state of the art developments in thinking and reasoning research Topics covered range across all sub areas of thinking and reasoning including deduction induction abduction

judgment decision making argumentation problem solving expertise creativity and rationality The contributors engage with cutting edge debates such as the status of dual process theories of thinking the role of unconscious intuitive emotional and metacognitive processes in thinking and the importance of probabilistic conceptualisations of thinking and reasoning Authors also examine the importance of neuroscientific findings in informing theoretical developments and explore the situated nature of thinking and reasoning across a range of real world contexts such as mathematics medicine and science The Handbook provides a clear sense of the way in which contemporary ideas are challenging traditional viewpoints as new paradigm of the psychology of reasoning emerges This paradigm shifting research is paving the way toward a richer and more inclusive understanding of thinking and reasoning where important new questions drive a forward looking research agenda It is essential reading for both established researchers in the field of thinking and reasoning as well as advanced students wishing to learn more about both the historical foundations and latest developments in this rapidly growing field

The Cambridge Handbook of Metaphor and Thought Raymond W. Gibbs, Jr., 2008-09-22 A comprehensive collection of essays in multidisciplinary metaphor scholarship that has been written in response to the growing interest among scholars and students from a variety of disciplines such as linguistics philosophy anthropology music and psychology These essays explore the significance of metaphor in language thought culture and artistic expression There are five main themes of the book the roots of metaphor metaphor understanding metaphor in language and culture metaphor in reasoning and feeling and metaphor in non verbal expression Contributors come from a variety of academic disciplines including psychology linguistics philosophy cognitive science literature education music and law

The Construction of Metaphoric Text and Talk Meizhen Liao, 2024-08-09 The Construction of Metaphoric Text and Talk A Discourse Analytic Approach argues that in view of their omnipresence in human thinking and action metaphors play a very important role in discourse construction and organization and this role can be textural and textual In order to explore the textual role of metaphors Meizhen Liao proposes that metaphors in discourse be treated as a complex adaptive system CAS which is further composed of two sub systems a micro one consisted of the tenor and the vehicle and a macro one made up of different metaphors The dynamic interaction within the micro system between the tenor and the vehicle in terms of mapping as well as among the macro system of all the metaphors in the text or talk via competition cooperation or complementation contributes to the construction and organization of discourse as an adaptive process in pursuit for the goal or goals of the discourse In the process of the interaction emergent textual patterns develop and an adequate analysis of the patterns at both micro and macro as well as deep and surface levels of discourse will shed light on the true nature and pattern of human thinking and action The author concludes that as metaphor has become entrenched in our conceptual system the study of metaphor as a complex adaptive system in discourse be conducted in its own right
