The Art of Cartography Eduard Imhof, 1968 **Mapping Beyond Measure** Simon Ferdinand, 2019-12-01 Over the last century a growing number of visual artists have been captivated by the entwinements of beauty and power truth and artifice and the fantasy and functionality they perceive in geographical mapmaking This field of map art has moved into increasing prominence in recent years yet critical writing on the topic has been largely confined to general overviews of the field In Mapping Beyond Measure Simon Ferdinand analyzes diverse map based works of painting collage film walking performance and digital drawing made in Britain Japan the Netherlands Ukraine the United States and the former Soviet Union arguing that together they challenge the dominant modern view of the world as a measurable and malleable geometrical space This challenge has strong political ramifications for it is on the basis of modernity's geometrical worldview that states have legislated over social space that capital has coordinated global markets and exploited distant environments and that powerful cartographic institutions have claimed exclusive authority in mapmaking Mapping Beyond Measure breaks fresh ground in undertaking a series of close readings of significant map artworks in sustained dialogue with spatial theorists including Peter Sloterdijk Zygmunt Bauman and Michel de Certeau In so doing Ferdinand reveals how map art calls into question some of the central myths and narratives of rupture through which modern space has traditionally been imagined and establishes map art's distinct value amid broader contemporary shifts toward digital mapping Map Art Lab Jill K. Wang, 2023-11-21 This is the first English language monograph on the early history of cartography in China Its chief players are three maps found in tombs that date from the fourth to the second century BCE and together constitute the entire known corpus of ancient Chinese maps ditu A millennium separates them from the next available map from 1136 CE Most scholars study them through the lens of modern empirical definitions of maps and their use This book offers an alternative view by drawing on methods not just from cartography but from art history archaeology and religion It argues that as tomb objects the maps were designed to be simultaneously functional for the living and the dead that each map was drawn to serve navigational purposes of guiding the living from one town to another as well as to diagram ritual order thereby taming the unknown territory of the dead In contrast with traditional scholarship *The Art of Terrestrial Diagrams in Early China* proposes that ditu can speak through their forms Departing from dominant theories of representation that forge a narrow path from form to meaning the book braids together two main strands of argumentation to explore the multifaceted and multifunctional diagrammatic tradition of rendering space in early China Mapping the Landscape Nicholas Alfrey, Stephen Daniels, 1990 The Art of Cartography J. **The Art of Joaquín Torres-García** Aarnoud Rommens,2016-08-05 Intertwining art history aesthetic theory and Latin American studies Aarnoud Rommens challenges contemporary Eurocentric revisions of the history of abstraction through this study of the Uruguayan artist Joaquín Torres García After studying and painting for decades in Europe Torres García returned in 1934 to his native home Montevideo with the dream of reawakening and revitalizing what he considered the true indigenous essence of Latin American art Abstract Spirit Rommens rigorously analyses the paradoxes of the painter's aesthetic philosophical doctrine of Constructive Universalism as it sought to adapt European geometric abstraction to the Americas Whereas previous scholarship has dismissed Torres García's theories as self contradictory Rommens seeks to recover their creative potential as well as their role in tracing the transatlantic routes of the avant garde Through the highly original method of reading Torres García's artworks as a critique on the artist's own writings Rommens reveals how Torres García appropriates the colonial language of primitivism to construct the artificial image of pure pre Columbian abstraction Torres García thereby inverts the history of art this book teases out the important lessons of this gesture and the implications for our understanding of abstraction today
