Clare Wenger, 2021-11-07 Much previous research on elderly people had focused on their problems and had created an impression of a group of isolated individuals suffering from almost insurmountable social difficulties Originally published in 1984 this study of the everyday lives of elderly people and the sources of help and care available to them in the community at the time made a special contribution by showing how they can and do make creative adaptations to the challenge of age and by increasing our understanding of their informal networks of support The author looks not only at the role and availability of family but also of friends neighbours voluntary associations and statutory services and the composite networks of support which these contacts form noting differences related to gender class and household composition The detailed picture that she presents would be invaluable to those teachers students and practitioners of social work concerned with the development of

more community based patterns of social work as recommended by the Barclay Report and to policy makers who needed to understand how sometimes strained natural support systems may be reinforced and maintained The book also extends our knowledge of the normal lives of elderly people and will be of general interest to social gerontologists and network theorists in sociology and anthropology

The Doctor-patient Relationship in the Changing Health Scene, 1978

The Doctor in the Victorian Novel Dr Tabitha Sparks, 2013-04-28 With the character of the doctor as her subject Tabitha Sparks follows the decline of the marriage plot in the Victorian novel As Victorians came to terms with the scientific revolution in medicine of the mid to late nineteenth

century the novel's progressive distance from the conventions of the marriage plot can be indexed through a rising identification of the doctor with scientific empiricism. A narrative's stance towards scientific reason Sparks argues is revealed by the fictional doctor's relationship to the marriage plot. Thus novels that feature romantic doctors almost invariably deny the authority of empiricism as is the case in George MacDonald's *Adela Cathcart*. In contrast works such as Wilkie Collins's *Heart and Science* which highlight clinically minded or even sinister doctors uphold the determining logic of science and in turn threaten the novel's romantic plot. By focusing on the figure of the doctor rather than on a scientific theme or medical field Sparks emulates the Victorian novel's personalization of tropes and belief systems using the realism associated with the doctor to chart the sustainability of the Victorian novel's central imaginative structure the marriage plot. As the doctors Sparks examines increasingly stand in for the encroachment of empirical knowledge on a morally formulated artistic genre their alienation from the marriage plot and its interrelated decline succinctly herald the end of the Victorian era and the beginning of Modernism.
