The Gyroverse The Hidden Structure Of The Universe:

The Gyroverse Donald Wortzman, 2010-01-06 Richard Feynman the renowned physicist in his book QED after discussing an unusual aspect of quantum physics stated the more you see how strangely nature behaves the harder it is to make a model that explains how even the simplest phenomenon actually works So theoretical physics has given up on that Don Wortzman hasn't His ground breaking Gyroverse Theory simply and convincingly validates the twelve dimensional helical construction of the universe This surprising construct is able to explain most of the strange phenomena that have stymied the physics community for so long It challenges and entertains while offering an understanding of how the universe actually works The common mechanism of the seven forces of nature including three unrecognized ones are described Contrary to appearances none involve attraction they all push rather than pull The equivalence of the masses of gravity and inertia a 300 year mystery is solved The big bang theory is described without resorting to Inflation Theory Additionally particle spin anti matter duality quantum entanglement non simultaneity and many other phenomena are simply explained Nevertheless from the inside where we reside the entire three dimensional universe is on the surface of a four dimensional sphere expanding outwardly at the speed of light It enlarges by driving into new territory rather than by the stretching of empty space Consequently matter is not energy but is mass in motion at speed of light In short the Gyroverse Theory combines quantum relativity and cosmology into a single unified theory
