Texas Register Texas. Secretary of State,1997 Handbook of Drug Abuse Prevention Zili Sloboda,William J. Bukoski,2007-08-06 There are a number of reasons why this book is important First there is no one source that summarizes what we know about the prevention of substance abuse from the research field so the book serves as a repository of accumulated knowledge on prevention theory intervention design and development and prevention research methodology Second as an evolving field prevention science has only begun to assert itself in both the arenas of practice and policy The formation of the Society for Prevention Research in 1991 was the first recognition that a science of prevention existed and required a separate forum to present the rapidly growing content of the field for discussion and review Finally there is a need to establish a baseline a reference point against which progress in the field of prevention science can be assessed This book serves all of these purposes The idea for this book grew from the observation in the early 1990s that after decades of attempts to develop effective interventions to prevent drug use among children and adolescents in the United States that we were finally having success particularly in addressing the initiation of use These successes are the result of research that has provided a better understanding of the factors and processes associated with the onset of substance use

Health Promotion in Schools, Universities, Workplaces, and Communities Graça S. Carvalho, Emily Darlington, Teresa Vilaça, 2024-12-17

Health education, well-being improvement, and advocacy are effective health promotion strategies among cutting-edge Public Health practices. Salutogenic perspectives rooted in ecological models have taken their rightful place to empower individuals and communities to change their life ecosystems and preserve and improve their health. It is imperative to shift from targeting protective or risk factors which have linear causal relationships with health conditions and/or comorbidities and encompass a systemic understanding of the role of health determinants in creating health. Individual, collective, and structural ecological approaches can better reduce health inequities. Moreover, engaging the presumed beneficiaries from such strategies ensures that actual needs are identified and choices are context-specific. It improves the whole implementation process as well as its results. Higher levels of participation such as co-creation imply a bottom-up, voluntary, collaborative process rooted in values of diversity, mutual trust, openness, autonomy, freedom, and respect, as well as shared expertise, responsibility, and decision-making, which are essential values in co-creating health promotion.
