Andrea Glauser, 2020-03-12 In den letzten zwei Jahrzehnten sind weltweit so viele Hochhäuser gebaut worden wie nie zuvor Auch in Europa wo lange Zeit vor allem Kirchen und Schornsteine vertikale Akzente setzten prägen sie vermehrt das Gesicht der Städte Die neuere monumentale Architektur ist mit vielfältigen Versprechen Begehrlichkeiten und Befürchtungen verknüpft Am Beispiel von Paris London und Wien diskutiert diese Studie welche Vorstellungen von Urbanität dabei im Spiel sind Sie verortet das vertikale Bauen im Spannungsfeld von globalisierten Vergleichshorizonten und städtischem Eigensinn

More high rises have been built worldwide over the past two decades than ever before Even in Europe where vertical accents have traditionally been placed by steeples and chimneys towering buildings are increasingly shaping the face of cities This new monumental architecture is associated with a variety of promises desires and fears Based on the examples of Paris London and Vienna this study discusses the concepts of urbanity that come into play here It contextualizes vertical construction in the field of tension between globalized horizons of comparison on the one hand and urban specificity on the other **The Architecture of Adrian Smith** Sarah Noal, 2015-08-04 This book is another high calibre volume in IMAGES

The Vertical City K. Al-Kodmany,2018-06-25 Each century has its own unique approach toward addressing the problem of high density and the 21st century is no exception As cities try to cope with rapid population growth adding 2.5 billion dwellers by 2050 and grapple with destructive sprawl politicians planners and architects have become increasingly interested in the vertical city paradigm Unfortunately cities all over the world are grossly unprepared for integrating tall buildings as these buildings may aggravate multidimensional sustainability challenges resulting in a vertical sprawl that could have worse consequences than horizontal sprawl By using extensive data and numerous illustrations this book provides a comprehensive guide to the successful and sustainable integration of tall buildings into cities A new crop of skyscrapers that employ passive design strategies green technologies energy saving systems and innovative renewable energy offers significant architectural improvements At the urban scale the book argues that planners must integrate tall buildings with efficient mass transit walkable neighbourhoods cycling networks vibrant mixed use activities iconic transit stations attractive plazas well landscaped streets spacious parks and engaging public art Particularly it proposes the Tall Building and Transit Oriented Development TB TOD model as one of the sustainable options for large cities going forward Building on the work of leaders in the fields of ecological and sustainable design this book will open readers eyes to a wider range of possibilities for

utilizing green resilient smart and sustainable features in architecture and urban planning projects The 20 chapters offer comprehensive reading for all those interested in the planning design and construction of sustainable cities Planning for Tall Buildings Michael Short, 2012-11-12 In a time of recession the challenge of building and planning for tall buildings has become even more complex the economics of development legislative and planning frameworks and the local politics of development must be navigated by those wishing to design and construct new tall buildings which fit within the fabric of their host cities This book is a timely contribution to the debate about new tall buildings and their role and effect on our cities It is divided into two main parts In part one the relationship between tall buildings and planning is outlined followed by an exploration of the impacts that construction of tall buildings can have It focuses in particular on the conservation debates that proposals for new tall buildings raise The first part ends with an analysis of the way in which planning strategies have evolved to deal with the unique consequences of tall buildings on their urban locations The second part of the book focuses on seven examples of medium sized cities dealing with planning and conservation issues and implications that arise from tall buildings These have been chosen to reflect a wide range of methods to either encourage or to control tall buildings that cities are deploying The case studies come from across the western world covering England Manchester Liverpool Newcastle and Birmingham Norway Oslo Ireland Dublin and Canada Vancouver and represent a broad spectrum of approaches to dealing with this issue In drawing together the experiences of these varied cities the book contributes to the ongoing debate about the role of the tall building in our cities their potential impacts and experiences of those who use and inhabit them The conclusions outline how cities should approach the strategic planning of tall buildings as well as how they should deal with the consequences of individual buildings particularly on the built heritage Rethinking Aesthetics Ritu Bhatt, 2013-03-05 Rethinking Aesthetics is the first book to bring together prominent voices in the fields of architecture philosophy aesthetics and cognitive sciences to radically rethink the relationship between body and design These essays argue that aesthetic experiences can be nurtured at any moment in everyday life thanks to recent discoveries by researchers in neuroscience phenomenology somatics and analytic philosophy of the mind who have made the correlations between aesthetic cognition the human body and everyday life much clearer The essays by Yuriko Saito Juhani Pallasmaa and Richard Shusterman among others range from an integrated mind body approach to chair design to Zen Buddhist notions of mindfulness to theoretical accounts of existential relationships with buildings to present a full spectrum of possible inquiries By placing the body in the center of design Rethinking Aesthetics opens new directions for rethinking the limits of both essentialism and skepticism Architecture, Technology and Process Chris Abel, 2007-03-30 This new selection of essays follows Chris Abel's previous best selling collection Architecture and Identity Drawing upon a wide range of knowledge and disciplines the author argues that underlying technological changes in the process of architectural production are fundamental changes in the way we think about machines and the world we live in Key topics include new patterns of urbanism in the fast growing cities of asia

pacific metaphorical extensions of mind and body in cyberspace the divergent European and North American values shaping Sir Norman Foster s and Frank Gehry s work and the collaborative work methods and technologies creating the adaptable design practices of today
