**Health** John G. Carlson, A. Ronald Seifert, 2013-11-21 An attractive feature of self regulation therapies is that instead of doing something to the patients they teach them to do something for themselves Furthermore the fact that the patient is able to do something to cope with his or her health problem can produce a significant reduction in the stress that may have contributed to that problem and in the additional stress that it produces While the idea that the mind can play a role in the health of the body and some therapeutic techniques based on this idea are not new remarkable scientific advances have been made recently in the area of self regulation and health There has been an exciting and rapidly accelerating increase in our basic science knowledge of homeostasis or in other words how the body regulates itself in order to maintain health Technical and conceptual advances are increasing our knowledge of the details of such regulation at all levels cells tissues organs organ systems and the body as a whole We are learning how the competing demands of different elements at each of these levels are adjusted by the brain which with its neural and humoral mechanisms is the supreme organ of integration of the body

Friedman,2013-04-17 This volume is the outcome of the NATO Advanced Research Workshop on Time Action and Cognition which was held in Saint Malo France in October 1991 The theme time in action and cognition of time was sparked by growing awareness in informal meetings between mostly French speaking time psychologists of the need to bring together time specialists in the areas of development motor behavior attention memory and representations The workshop was designed to be a forum where different theoretical points of view and a variety of empirical approaches could be presented and discussed Time psychologists tended to draw conclusions restricted to their specific fields of interest From our own experience we felt that addressing a common issue possible relationships between time in action and representations of time could lead to a more comprehensive approach We are indebted to NATO for allowing us to bring this idea to fruition We take this opportunity as well to express our thanks to Cognisciences Cognisud section an active interdisciplinary research organization for its financial backing and the CNRS for its scientific support *Cumulated Index Medicus* ,1979
