Peterson, Sarah M. McCaffrey, Toral Patel-Weyand, 2022-08-11 This open access book synthesizes current information on wildland fire smoke in the United States providing a scientific foundation for addressing the production of smoke from wildland fires This will be increasingly critical as smoke exposure and degraded air quality are expected to increase in extent and severity in a warmer climate Accurate smoke information is a foundation for helping individuals and communities to effectively mitigate potential smoke impacts from wildfires and prescribed fires The book documents our current understanding of smoke science for 1 primary physical chemical and biological issues related to wildfire and prescribed fire 2 key social issues including human health and economic impacts and 3 current and anticipated management and regulatory issues Each chapter provides a summary of priorities for future research that provide a roadmap for developing scientific information that can improve smoke and fire management over the next decade **Smoke Exposure Among Wildland Firefighters** Timothy E. fire scenarios are impacted by climatic trends and changes in climatic extremes as well as by anthropic pressure. It is to be expected that future trends especially in the Mediterranean regions will certainly lead to an increasing impact of human pressure on the natural environment due to increases in tourism and to the enlargement of urban residential areas invading the countryside. Forecasting the effects of both factors climatic and anthropic and separating their effects on forest fires frequencies may be particularly difficult but is essential to improve our knowledge of forest fire occurrence probability and to better organize prevention and fighting activities. At the same time estimation of the possible increase of fire risk over coming years is important taking into account also the diverse fire prone environments present in the Mediterranean as well as many other areas mountain slopes coastal zones large islands etc. This book contains peer reviewed papers presented at the Second International Conference on Modelling Monitoring and Management of Forest Fires held in Kos Greece in 2010. The papers covered important topics in the field of prevention and fighting of forest fires including Computational Methods and Experiments Air Quality and Health Risk Models Detection Monitoring and Response Systems Decision Support Systems Resource Optimization Risk Assessment and Vulnerability Assessment.

Landscape Fire, Smoke, and Health Tatiana V. Loboda, Nancy H. F. French, Robin C. Puett, 2023-10-17. A transdisciplinary approach to investigating relationships between biomass burning and human health outcomes. Where and when wildfires occur what pollutants they emit how the chemistry of smoke changes in the atmosphere and what impact this air pollution has on human health and well being are questions explored across different scientific disciplines. Landscape Fire Smoke and Health Linking Biomass Burning Emissions to Human Well Being is designed to create a foundational knowledge base allowing interdisciplinary teams to interact more effectively in addressing the impacts of air pollution from biomass burning on human health. Volume highlights include Core concepts principles and terminology related to smoke and air quality used in different disciplines. Observational and modeling tools and approaches in fire science. Methods to sense model and map smoke in the atmosphere. Impacts of biomass burning smoke on the health and well being of children and adults. Perspectives from researchers modelers and practitioners. Case studies from different countries. Information to support decision making and policy. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers students and professionals.

Bridging the Worlds of Fire Managers and Researchers Seth M. White, 2009-05. In 2003 over 250 managers researchers and other participants gathered for a series of workshops at Oregon State Univ the Univ of Arizona and Colorado State Univ near the largest wildfires of 2002. These Wildland Fire Workshops were designed to create an atmosphere for quality interactions between managers and researchers and to accomplish the following objectives: 1 create a prioritized list of recommendations for future wildland fire research 2 identify the characteristics of effective partnerships 3 identify types of effective information tools and processes and 4 evaluate the workshops as a potential blueprint for similar workshops in other regions. Many common themes emerged.

and Medicine, Roundtable on the Promotion of Health Equity, Roundtable on Population Health Improvement, Forum on Medical and Public Health Preparedness for Disasters and Emergencies, 2020-08-31 California and other wildfire prone western states have experienced a substantial increase in the number and intensity of wildfires in recent years. Wildlands and climate experts expect these trends to continue and quite likely to worsen in coming years. Wildfires and other disasters can be particularly devastating for vulnerable communities. Members of these communities tend to experience worse health outcomes from disasters, have fewer resources for responding and rebuilding, and receive less assistance from state, local, and federal agencies. Because burning wood releases particulate matter and other toxicants, the health effects of wildfires extend well beyond burns. In addition, deposition of toxicants in soil and water can result in chronic as well as acute exposures. On June 4-5, 2019, four different entities within the National Academies of Sciences, Engineering, and Medicine held a workshop titled "Implications of the California Wildfires for Health Communities and Preparedness" at the Betty Irene Moore School of Nursing at the University of California, Davis. The workshop explored the population health, environmental health, emergency preparedness, and health equity consequences of increasingly strong and numerous wildfires, particularly in California. This publication is a summary of the presentations and discussion of the workshop.

Climate Change and Air Pollution Rais Akhtar, Cosimo Palagiano, 2017-10-05 This book discusses regional and international climate change, air pollution, and human health scenarios. The research from both industrialized and developing countries focuses on region-specific perspectives of climate change impacts on air pollution. After analyzing the variations of climate data over recent decades, the authors consider the different effects of climate change on air pollution and health. As stressed by the IPCC, pollen, smoke, and ozone levels are likely to increase in a warming world, affecting the health of residents of major cities. Rising temperatures will worsen air quality through a combination of more ozone in cities, bigger wild fires, and worse pollen outbreaks, according to a major UN climate report. The report follows the World Health Organization in finding that air pollution is the world's greatest environmental health risk, killing 7 million people in 2014 compared to 0.4 million deaths due to malaria. Deteriorating air quality will most affect the elderly, children, people with chronic ill health, and expectant mothers. Another report suggests that more than 5.5 million people die prematurely each year due to air pollution, with over half of those deaths occurring in China and India. A study on the air pollution in the USA suggests that more than half of the US population lives in areas with potentially dangerous air pollution, and about six out of 10 of the top cities for air pollution in the USA are located in the state of California. In the face of future climate change, scientists have urged stronger emission controls to avoid worsening air pollution and the associated exacerbation of health problems, especially in more populated regions of the world. It is hoped that the implementation of the Paris Climate Agreement will help minimize air pollution. Additionally, the authors consider the various measures that different countries and groups of countries like the European Union have adopted to mitigate the problems arising from climate change and to safeguard the health of the population. The book examines the increasing incidence

of diseases largely caused by climate change The countries regions covered in this study include the USA Northern Europe U
K Southern Europe Italy Canada Australia East Asia Russia Hong Kong Taiwan Thailand Malaysia Indonesia India South
Africa Mexico Brazil Caribbean countries and Argentina
