

Some Solved and Unsolved Problems of Mine in Number Theory

Paul Erdős

I.

Let $p_1 < p_2 < \dots$ be the sequence of consecutive primes. Put $d_{n+1} = p_n - d_n$. It is well known that the sequence d_n behaves very irregularly. An old result of Ricci and myself states that the set of limit points of $d_n/\log n$ has positive measure. "It is of course clear to every right thinking person" that the set $d_n/\log n$ is dense in $(0, \infty)$, but we are very far from being able to prove this ("we" here stands for the collective intelligence (or rather stupidity) of the human race). By a result of Westzynthius, ∞ is a limit point of $d_n/\log n$ but no other limit point is known.

Turán and I easily proved that both inequalities $d_n > d_{n+1}$ and $d_n < d_{n+1}$ have infinitely many solutions; we noticed with some annoyance and disappointment that we could not prove that $d_n > d_{n+1} > d_{n+2}$ has infinitely many solutions. We were even more annoyed when we soon noticed that we could not even prove that either $d_n > d_{n+1} > d_{n+2}$ or $d_n < d_{n+1} < d_{n+2}$ has infinitely many solutions. In other words we could not prove that for every n , $(-1)^i(d_{n+i+1} - d_{n+i})$ must have infinitely many changes of sign. I offer 250 dollars for a proof of this conjecture (and 25,000 for a disproof).

Put $f(n) = \log n \log \log n \log \log \log \log n / (\log \log \log n)^2$. Rankin proved in 1938 that

$$(1) \quad \limsup \left(\frac{d_n}{f(n)} \right) > 0 .$$

I offered 10,000 dollars for a proof of

$$(2) \quad \limsup \left(\frac{d_n}{f(n)} \right) = \infty .$$

Solved And Unsolved Problems In Number Theory 3e 85:

Unsolved Problems in Number Theory Richard Guy, 2013-03-09 Mathematics is kept alive by the appearance of new unsolved problems posed from within mathematics itself and also from the increasing number of disciplines where mathematics is applied. This book provides a steady supply of easily understood if not easily solved problems which can be considered in varying depths by mathematicians at all levels of mathematical maturity. For this new edition the author has included new problems on symmetric and asymmetric primes sums of higher powers Diophantine m-tuples and Conway's RATS and palindromes. The author has also included a useful new feature at the end of several of the sections lists of references to OEIS Neil Sloane's Online Encyclopedia of Integer Sequences. About the first Edition many talented young mathematicians will write their first papers starting out from problems found in this book András Sárkány MathSciNet A

Course in Number Theory H. E. Rose, 1995 The second edition of this undergraduate textbook is now available in paperback. Covering up to date as well as established material it is the only textbook which deals with all the main areas of number theory taught in the third year of a mathematics course. Each chapter ends with a collection of problems and hints and sketch solutions are provided at the end of the book together with useful tables Number Theory Peter D.

Schumer, 2025-08-18 This is a book for an undergraduate number theory course senior thesis work graduate level study or for those wishing to learn about applications of number theory to data encryption and security. With no abstract algebra background required it covers congruences the Euclidean algorithm linear Diophantine equations the Chinese Remainder Theorem Möbius inversion formula Pythagorean triplets perfect numbers and amicable pairs Law of Quadratic Reciprocity theorems on sums of squares Farey fractions periodic continued fractions best rational approximations and Pell's equation. Results are applied to factoring and primality testing including those for Mersenne and Fermat primes probabilistic primality tests Pollard's rho and p-1 factorization algorithms and others. Also an introduction to cryptology with a full discussion of the RSA algorithm discrete logarithms and digital signatures. Chapters on analytic number theory including the Riemann zeta function average orders of the lattice and divisor functions Chebyshev's theorems and Bertrand's Postulate. A chapter introduces additive number theory with discussion of Waring's Problem the pentagonal number theorem for partitions and Schnirelmann density.

Markov's Theorem and 100 Years of the Uniqueness Conjecture Martin Aigner, 2013-07-18 This book takes the reader on a mathematical journey from a number theoretic point of view to the realm of Markov's theorem and the uniqueness conjecture gradually unfolding many beautiful connections until everything falls into place in the proof of Markov's theorem. What makes the Markov theme so attractive is that it appears in an astounding variety of different fields from number theory to combinatorics from classical groups and geometry to the world of graphs and words. On the way there are also introductory forays into some fascinating topics that do not belong to the standard curriculum such as Farey fractions modular and free groups hyperbolic planes and algebraic words. The book closes with a discussion of the current

state of knowledge about the uniqueness conjecture which remains an open challenge to this day All the material should be accessible to upper level undergraduates with some background in number theory and anything beyond this level is fully explained in the text This is not a monograph in the usual sense concentrating on a specific topic Instead it narrates in five parts Numbers Trees Groups Words Finale the story of a discovery in one field and its many manifestations in others as a tribute to a great mathematical achievement and as an intellectual pleasure contemplating the marvellous unity of all mathematics

Inverse and Algebraic Quantum Scattering Theory Barnabas Apagyi,Gabor Endredi,Peter

Levay,2013-12-30 This volume contains three interrelated beautiful and useful topics of quantum scattering theory inverse scattering theory algebraic scattering theory and supersymmetrical quantum mechanics The contributions cover such issues as coupled channel inversions at fixed energy inversion of pion nucleon scattering cross sections into potentials inversions in neutron and x ray reflection 3 dimensional fixed energy inversion inversion of electron scattering data affected by dipole polarization nucleon nucleon potentials by inversion versus meson exchange theory potential reversal and reflectionless impurities in periodic structures quantum design in spectral scattering and decay control solution hierarchy of Toda lattices etc
