Some Current Mathematical Topics In Cancer Research:

Some Current Mathematical Topics in Cancer Research George W. Swan, 1977 Mathematical Models in Cancer Research, T. E. Wheldon, 1988 Cancer research deals with all aspects of malignant transformation tumour growth and the effects of treatment Mathematical models enable quantitative representations of the changes affecting cell state and cell number This book provides a review of the scope of mathematical modelling in cancer research bringing together for the first time a group of related mathematical topics including multistage carcinogenesis tumour growth kinetics growth control radiotherapy chemotherapy and biological targeting in cancer treatment Physicists and mathematicians interested in medical research biomathematicians biostatisticians radiation and medical oncologists and experimental and theoretical biologists will welcome this critical review of mathematical modelling in cancer research This book will also be of interest to clinicians basic cancer scientists and physicists working in radiotherapy departments and to postgraduate students on courses in oncology and subjects Current Catalog National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70 *Optimization of Human Cancer Radiotherapy* G.W. Swan, 2013-03-08 The mathematical models in this book are concerned with a variety of approaches to the manner in which the clinical radiologic treatment of human neoplasms can be improved These improvements comprise ways of delivering radiation to the malignancies so as to create considerable damage to tumor cells while sparing neighboring normal tissues There is no unique way of dealing with these improvements Accordingly in this book a number of different presentations are given Each presentation has as its goal some aspect of the improvement or optimization of radiotherapy This book is a collection of current ideas concerned with the optimization of human cancer radiotherapy It is hoped that readers will build on this collection and develop superior approaches for the understanding of the ways to improve therapy The author owes a special debt of thanks to Kathy Prindle who breezed through the typing of this book with considerable dexterity

Adam, Nicola Bellomo, 2012-10-06 Mathematical Modeling and Immunology An enormous amount of human effort and economic resources has been directed in this century to the fight against cancer The purpose of course has been to find strategies to overcome this hard challenging and seemingly endless struggle We can readily imagine that even greater efforts will be required in the next century The hope is that ultimately humanity will be successful success will have been achieved when it is possible to activate and control the immune system in its competition against neoplastic cells Dealing with the above mentioned problem requires the fullest possible cooperation among scientists working in different fields biology im

L. Teo,1994 This monograph is a study of optimal control applied to cancer chemotherapy the treatment of cancer using drugs that kill cancer cells The aim is to determine whether current methods for the administration of chemotherapy are optimal and if alternative regimens should be considered The research utilizes the mathematical theory of optimal control an active research area for many mathematicians scientists and engineers It is of multidisciplinary nature having been applied to areas ranging from engineering to biomedicine The aim in optimal control is to achieve a given objective at minimum cost A set of differential equations is used to describe the evolution in time of the process being modelled and constraints limit the policies that can be used to attain the objective In this monograph mathematical models are used to construct optimal drug schedules These are treatment guidelines specifying which drug to deliver when and at what dose Many current drug schedules have been derived empirically based upon rules of thumb The monograph has been structured so that most of the high level mathematics is introduced in a special appendix In this way a scientist can skip the more subtle aspects of the theory and still understand the biomedical applications that follow However the text is self contained so that a deeper understanding of the mathematics of optimal control can be gained from the mathematical appendix The mathematical models in this book and the associated computer simulations show that low intensity chemotherapy is a better choice of treatment than high intensity chemotherapy under certain conditions **Dynamical Systems** D. Arrowsmith,C.M. Place,1992-08-01 This text discusses the qualitative properties of dynamical systems including both differential equations and maps The approach taken relies heavily on examples supported by extensive exercises hints to solutions and diagrams to develop the material including a treatment of chaotic behavior The unprecedented popular interest shown in recent years in the chaotic behavior of discrete dynamic systems including such topics as chaos and fractals has had its impact on the undergraduate and graduate curriculum However there has until now been no text which sets out this developing area of mathematics within the context of standard teaching of ordinary differential equations Applications in physics engineering and geology are considered and introductions to fractal imaging and cellular automata are given *Dynamical Systems* C.M. Receptors: Models for Binding, Trafficking, and Signaling Douglas A. Lauffenburger, Jennifer J. Linderman, 1996-05-02 This book offers a bridge at the interface between engineering and cell biology demonstrating how a mathematical modelling approach combined with quantitative experiments can provide enhanced understanding of cell phenomena involving receptor ligand interactions Model frameworks are described over the entire spectrum of receptor processes from fundamental cell surface binding intracellular trafficking and signal transduction events to the cell behavioural functions they govern including proliferation adhesion and migration
