SOME PAPERS ON THE CEREBRAL CORTEX

Some Papers On THE CEREBRAL CORTEX

Translated from
the French and German by

GERHARDT VON BONIN

Professor of Anatomy, College of Medicine
University of Illinois, Chicago, Illinois

Selecting the papers mainly for their general interest and the breadth of outlook which they enable the reader to form, Professor von Bonin tells a consistent and interesting story.

It starts out with Pierre Flourens, then follows a purely anatomical paper by Retzius, and a more clinical paper by Broca. Then follows Fritsch and Hitzig, Munk, Golz, Meynert, Flechsig, Brodmann and von Monakow from the German and finally Ramon y Cajal from the French.

A paper by Leyton and Sherrington which is taken from English closes the book.

The struggle between holistic and biologic views is clearly mirrored in these papers and that should help to understand the major issues at stake.

Some Papers on the Cerebral Cortex. Translated from the French and German [and Edited] by G. Von Bonin

Gerhardt VON BONIN, 1960 Cortical Areas Almut Schuez, Robert Miller, 2002-05-30 The study of areas in the cerebral cortex has a long history bringing empirical data into close relation with fundamental conceptual issues about the cortex The subject is currently being revitalized with the advent of new experimental methods and this book brings a modern perspective to the study of these areas Cortical Areas Unity and Diversity Brain and Behaviour Bryan Kolb, Ian Whishaw, 2016-10-18 Revisiting the Classic Studies is a series of texts that introduces readers to the studies in psychology that changed the way we think about core topics in the discipline today It provokes students to ask more interesting and challenging questions about the field by encouraging a deeper level of engagement both with the details of the studies themselves and with the nature of their contribution Edited by leading scholars in their field and written by researchers at the cutting edge of these developments the chapters in each text provide details of the original works and their theoretical and empirical impact and then discuss the ways in which thinking and research has advanced in the years since the studies were conducted Brain and Behaviour Revisiting the Classic Studies traces 17 ground breaking studies by researchers such as Gage Luria Sperry and Tulving to re examine and reflect on their findings and engage in a lively discussion of the subsequent work that they have inspired Suitable for students on neuropsychology courses at all levels as well as anyone with an enquiring mind The Central Nervous System of Vertebrates Hartwig Kuhlenbeck, 1978 In 1927 Hartwig Kuhlenbeck published a series of lectures on the central nervous system of vertebrates and gave neurobiology its standard reference for decades The present work now complete in 5 volumes represents a monumental expansion of the early lectures Brain Mapping: The Methods Arthur W. Toga, John C. Mazziotta, 2002-09-25 The number of scientists and laboratories involved with brain mapping is increasing exponentially and the second edition of this comprehensive reference has also grown much larger than the first published in 1996 including for example five chapters on structural and functional MRI where the fi

An Illustrated History of Brain Function Edwin Clarke, Kenneth Dewhurst, Michael Jeffrey Aminoff, 1996 **Fearful Asymmetry** Richard Leblanc, 2017-08-01 Paul Broca made the most significant discovery in nineteenth century human biology when he found that speech resides within the left frontal lobe of the human brain As a young surgeon working at the hospice at Bic tre on the outskirts of Paris a repository for the criminal the insane the indigent and the sick Broca had to overcome derision acrimony personal attacks vindictiveness and prevailing doctrines before his findings were accepted Based on a new reading and translation of original records by Broca Jean Baptiste Bouillaud and Gustave Dax Fearful Asymmetry recounts the story of this hard won scientific discovery Richard Leblanc describes the contentious process beginning with Bouillaud who laid the groundwork for the findings that led Broca on the trail of discovery as he struggled to

bring forward a fundamental truth of neurology and ultimately of the human condition Finally Leblanc connects the research of the three French scientists to the work of Wilder Penfield at the Montreal Neurological Institute in the twentieth century when neurology moved beyond postmortem anatomical studies to direct observations of the conscious brain Making many of the debates about localization available for the first time in English Fearful Asymmetry provides a detailed account of one critical scientific success and the long history behind it

The Emergence of Neuroscience and the German Novel Sonja Boos,2021-09-29 The Emergence of Neuroscience and the German Novel Poetics of the Brain revises the dominant narrative about the distinctive psychological inwardness and introspective depth of the German novel by reinterpreting the novel's development from the perspective of the nascent discipline of neuroscience the emergence of which is coterminous with the rise of the novel form In particular it asks how the novel's formal properties stylistic narrative rhetorical and figurative correlate with the formation of a neuroscientific discourse and how the former may have assisted disrupted and or intensified the medical articulation of neurological concepts This study poses the question how does this rapidly evolving field emerge in the context of nineteenth century cultural practices and what were the conditions for its emergence in the German speaking world specifically Where did neuroscience begin and how did it broaden in scope And most crucially to what degree does it owe its existence to literature

Schab,Robert G. Crowder,2014-02-04 The power of odors to unlock human memory is celebrated in literature and anecdote but poorly documented by science Odors perhaps more than other stimuli are widely believed to evoke vivid and complex past experiences easily Yet in contrast to the frequency with which odors are thought to evoke memories of the past scientific evidence is thus far scant For years voluminous data have been collected on odor sensitivity whereas relatively few studies exist on memory for odors per se Moreover the memory data that do exist are thus far only poorly integrated with the most modern attitudes on human memory The major goal of this volume is to point the way toward a better state of affairs one in which the study of odor memory is legitimized as a proper specialization and is informed by the most promising ideas in the mainstream study of memory This volume explores three tendencies in modern memory theory that have not yet sufficiently penetrated the odor memory work memory coding memory and knowledge and implicit and explicit memory
