Some Topics In Probability And Analysis:

Some Topics in Probability and Analysis R. F. Gundy, 1989 *Some Topics in Probability and Analysis* Richard F. Gundy, 1989 This book is based on lectures presented by the author at DePaul University in July 1986 The lectures cover three main topics The first is local time theory for Brownian motion and some geometrical inequalities for harmonic functions in the upper half plane \mathbb{R}^n_+ The author sketches a proof of the inequalities obtained by Barlow and Yor for the maximal local time functional The second topic concerns a probabilistic treatment of Riesz transforms in \mathbb{R}^n_+ and semimartingale inequalities The author proves semimartingale inequalities of the type usually obtained for martingales The **Grants and Awards for the Fiscal Year Ended ...** National Science Foundation (U.S.), 1981 **Catalogue for the Academic Year** Naval Postgraduate School (U.S.), 1970 *Topics in Optimal Transportation* Cédric Villani, 2021-08-25 This is the first comprehensive introduction to the theory of mass transportation with its many and sometimes unexpected applications In a novel approach to the subject the book both surveys the topic and includes a chapter of problems making it a particularly useful graduate textbook In 1781 Gaspard Monge defined the problem of optimal transportation or the transferring of mass with the least possible amount of work with applications to engineering in mind In 1942 Leonid Kantorovich applied the newborn machinery of linear programming to Monge's problem with applications to economics in mind In 1987 Yann Brenier used optimal transportation to prove a new projection theorem on the set of measure preserving maps with applications to fluid mechanics in mind Each of these contributions marked the beginning of a whole mathematical theory with many unexpected ramifications Nowadays the Monge Kantorovich problem is used and studied by researchers from extremely diverse horizons including probability theory functional analysis isoperimetry partial differential equations and even meteorology Originating from a graduate course the present volume is intended for graduate students and researchers covering both theory and applications Readers are only assumed to be familiar with the basics of measure theory and functional analysis *Grants and Awards for Fiscal Year...* National Science Foundation (U.S.), 1977 *Linguistics across Disciplinary Borders* Steven Coats, Veronika Laippala, 2024-01-11 This volume highlights the ways in which recent developments in corpus linguistics and natural language processing can engage with topics across language studies humanities and social science disciplines New approaches have emerged in recent years that blur disciplinary boundaries facilitated by factors such as the application of computational methods access to large data sets and the sharing of code as well as continual advances in technologies related to data storage retrieval and processing The march of data denotes an area at the border region of linguistics humanities and social science disciplines but also the inevitable development of the underlying technologies that drive analysis in these subject areas Organized into 3 sections the chapters are connected by the underlying thread of linguistic corpora how they can be created how they can shed light on varieties or registers and how their metadata can be utilized to better understand the internal structure of similar resources While some chapters in the

volume make use of well established existing corpora others analyze data from platforms such as YouTube Twitter or Reddit The volume provides insight into the diversity of methods approaches and corpora that inform our understanding of the border regions between the realms of data science language linguistics and social or cultural studies **University of Michigan Official Publication** University of Michigan,1980 Each number is the catalogue of a specific school or college of the University Politics and Big Data Andrea Ceron,Luigi Curini,Stefano Maria Iacus,2016-12-19 The importance of social media as a way to monitor an electoral campaign is well established Day by day hour by hour evaluation of the evolution of online ideas and opinion allows observers and scholars to monitor trends and momentum in public opinion well before traditional polls However there are difficulties in recording and analyzing often brief unverified comments while the unequal age gender social and racial representation among social media users can produce inaccurate forecasts of final polls Reviewing the different techniques employed using social media to nowcast and forecast elections this book assesses its achievements and limitations while presenting a new technique of sentiment analysis to improve upon them The authors carry out a meta analysis of the existing literature to show the conditions under which social media based electoral forecasts prove most accurate while new case studies from France the United States and Italy demonstrate how much more accurate sentiment analysis can prove **Mathematics Curriculum Topic Study** Page Keeley,Cheryl M. Rose,2006-04-06 The Curriculum Topic Study CTS process provides a professional development strategy that links mathematics standards and research to curriculum instruction and assessment **Digital Libraries: Providing Quality Information** Robert B. Allen,Jane Hunter,Marcia L. Zeng,2015-12-17 This book constitutes the refereed proceedings of the 17th International Conference on Asia Pacific Digital Libraries ICADL 2015 held in Seoul South Korea in December 2015 The 22 full papers 9 short papers 7 panels 6 doctoral consortium papers and 19 poster papers presented were carefully reviewed and selected from 141 submissions The papers for this 2015 conference cover topics such as digital preservation gamification text mining citizen science data citation linked data and cloud computing **Classroom Assessment & Grading that Work** Robert J. Marzano,2006 Robert J Marzano distills 35 years of research to bring you expert advice on the best practices for assessing and grading the work done by today s students **Information in International Law** José M. Reis,2024-10-16 Examining state behavior this book sheds light on the often overlooked role of information production and diffusion in international law and relations Most theories of public international law and state behavior rely on a certain degree of international law related information such as an international legal ruling being made public and diffused to reach various key actors such as third states or domestic actors However while assumptions about information being produced and diffused permeate international legal scholarly work these assumptions have not been systematically and empirically evaluated Based on an empirical analysis the author challenges prevailing assumptions by systematically evaluating the accessibility and dissemination of crucial international law related information such as treaty negotiation documents or legal rulings Using a

variety of quantitative case studies on key stages of international lawmaking and covering various issue areas from human rights to trade law each chapter traverses three critical levels of analysis namely whether international law information is public and transparent whether the information is salient and reaches the general public and how the information is framed by the media and political elites The book will appeal to students researchers and scholars of law political science and economics as well as policy makers interested in a better understanding of information production and diffusion in international law and the impact of public opinion on compliance with international law

Analysing Design Thinking: Studies of Cross-Cultural Co-Creation Bo Christensen,Linden J. Ball,Kim Halskov,2017-08-03 The scientific analysis of design thinking continues to burgeon and is of considerable interest to academic scholars and design practitioners across many disciplines This research tradition has generated a growing corpus of studies concerning how designers think during the creation of innovative products although less focus has been given to analysing how designers think when creating less tangible deliverables such as concepts and user insights Analysing Design Thinking Studies of Cross Cultural Co Creation brings together 28 contributions from internationally leading academics with a shared interest in design thinking who take a close look at professional designers working on a project that not only involves soft deliverables but where a central role is played by co creation across multiple culturally diverse stakeholders This collection of detailed multi method analyses gives a unique insight into how a Scandinavian design team tackled a specific design task within the automotive industry over a four month design process All papers draw upon a common video based dataset and report analyses that link together a diversity of academic disciplines including psychology anthropology linguistics philosophy architecture management engineering and design studies The dataset affords multiple entry points into the analysis of design thinking with the selected papers demonstrating the application of a wide range of analytic techniques that generate distinct yet complementary insights Collectively these papers provide a coherent framework for analysing and
