Abell,James P. Braselton,2014-05-09 Differential Equations with Maple V provides an introduction and discussion of topics typically covered in an undergraduate course in ordinary differential equations as well as some supplementary topics such as Laplace transforms Fourier series and partial differential equations It also illustrates how Maple V is used to enhance the study of differential equations not only by eliminating the computational difficulties but also by overcoming the visual limitations associated with the solutions of differential equations The book contains chapters that present differential equations and illustrate how Maple V can be used to solve some typical problems The text covers topics on differential equations such as first order ordinary differential equations higher order differential equations power series solutions of ordinary differential equations the Laplace Transform systems of ordinary differential equations and Fourier Series and applications to partial differential equations Applications of these topics are also provided Engineers computer scientists physical scientists mathematicians business professionals and students will find the book useful *Introductory Differential Equations* Martha L. Abell,James P. Braselton,2009-09-09 This text is for courses that are typically called Introductory Differential Equations Introductory Partial Differential Equations Applied Mathematics Fourier Series and Boundary Value Problems The text is appropriate for two semester courses the first typically emphasizes ordinary differential equations and their applications while the second emphasizes special techniques like Laplace transforms and partial differential equations The texts follows a traditional curriculum and takes the traditional rather than dynamical systems approach Introductory Differential Equations is a text that follows a traditional approach and is appropriate for a first course in ordinary differential equations including Laplace transforms and a second course in Fourier series and boundary value problems Note that some schools might prefer to move the Laplace transform material to the second course which is why we have placed the chapter on Laplace transforms in its location in the text Ancillaries like Differential Equations with Mathematica and or Differential Equations with Maple would be recommended and or required ancillaries depending on the school course or instructor Technology Icons These icons highlight text that is intended to alert students that technology may be used intelligently to solve a problem encouraging logical thinking and application Think About It Icons and Examples Examples that end in a

question encourage students to think critically about what to do next whether it is to use technology or focus on a graph to determine an outcome Differential Equations at Work These are projects requiring students to think critically by having students answer questions based on different conditions thus engaging students      *Shivambu Nectar of Life* Jagdish R.
