King,2014-08-05 A journey through the history biology and culture of the misunderstood cormorant **Feathered Entanglements** Scott E. Simon,Frédéric Laugrand,2024-10-15 As they migrated across great distances ancient humans may have used birdsong and bird sightings to find food and water in unseen territory Today attending to birds helps scientists track not only avian migration but also environmental change Birds remain our sentinels Feathered Entanglements offers a rich tapestry of human bird relations across the Indo Pacific In this era of uncontrolled industrialization we have grown increasingly disconnected from the natural world The ways in which birds feature in the daily life symbolic systems and material culture of humans from pigeon keeping on the rooftops of Amman to the rituals of Indigenous peoples in Taiwan can teach us how to live with other species amid the challenges of the Anthropocene In a time of intensifying ecological crisis we need more than ever to protect and appreciate non human lives Feathered Entanglements embraces the connection between humans birds and our shared world *The Seabird's Cry* Adam Nicolson,2018-02-06 Originally published in The U K in 2017 by HarperCollins Fieldiana ,1928 **Global Ecology in Historical Perspective** Kazunobu Ikeya,William Balée,2023-03-10 This book primarily examines human animal and human plant interactions in Asian forests Southeast Asia and Japan and inland waters China For comparison cases from the Americas whales in the Arctic sea turtles in the Caribbean and plants in the Amazon and Central Asia are also included The relationship between plants animals and humans in Asia is quite unique from a global perspective For example satoyama in Japan means ecotone area or the boundary between a village and a forest There as the number of inhabitants declines bears wild boars and other animals increasingly ravage crops sometimes attacking humans as well By showing the regional nature of human animal and human plant interactions in Asia this book

provides for the first time a framework for understanding the world's animal and plant-human relationships. It is assumed that the relationships between humans and animals and plants during this period were diverse, including hunting, taming, semi-domestication, and full domestication. At the same time, for regions outside of Asia, the extent to which these diverse relationships were adapted and how diversity was formed is explained from the perspective of historical ecology. Customers can expect to derive perspectives on the coexistence of human-animal and plant-animal relationships from this book in the near future. The conservation of rare species, diverse habitats, and biodiversity is a central theme in considering the relationship between modern civilization and the global environment. In post-industrial Japan, one focus has been the protection of iconic animals such as storks, crested ibis, dugongs, and sea turtles, while damage to crops and humans by deer, wild boars, monkeys, bears, and other common animals has become an important social issue. How can the world's 7.7 billion-plus people live in harmony with other species? We would like to get some hints on how to solve the problems we are facing.
