and more industrial activities being performed in the Baltic Sea Area the threat level is rising The AUV survey is based on the IVER2 platform by OceanServer equipped with Klein 3500 side scan sonar The identification phase utilises several ROVs equipped with targeting sonars acoustic cameras capable of penetrating turbid bottom waters up to 20m and visual HD cameras A novel sediment sampling system based on a camera and sonar equipped cassette sampler has been developed to obtain surface sediments The test phase described consists of a survey phase which will locate the actual objects concerned and a monitoring phase which will concentrate on the collection of environmental data close to the objects concerned
