The Dynamics Of Concepts A Connectionist Model Lecture Notes In Artificial Intelligence Vol 766:

The Dynamics of Concepts Philip R. van Looche, 1994-01-28 This book offers a model for concepts and their dynamics. A basic assumption is that concepts are composed of specified components which are represented by large binary patterns whose psychological meaning is governed by the interaction between conceptual modules and other functional modules. A recurrent connectionist model is developed in which some inputs are attracted faster than others by an attractor where convergence times can be interpreted as decision latencies. The learning rule proposed is extracted from psychological experiments. The rule has the property that when a context becomes more familiar the associations between the concepts of the context spontaneously evolve from loose associations to a more taxonomic organization. APCOM XXV 1995, 1995

Brain-Like Computing and Intelligent Information Systems Shunichi Amari, Nikola Kasabov, 1998 This book introduces a new rapidly expanding area in computer science and artificial intelligence. Brain-like computing combines traditional computational techniques with cognitive models inspired by the brain for building information systems. Image and speech processing, creative planning and design, adaptive control, knowledge acquisition and database mining are only a few areas where brain-like computing is applied. *Application of Computers and Operations Research in the Mineral Industry*, 1995

Communication & Cognition, 2008 *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1993 *The Dynamics of Concepts* Philip R. van Looche, 2014-01-15 Analogical Connections Keith James Holyoak, John A. Barnden, 1994 Presenting research on the computational abilities of connectionist neural and neurally inspired systems, this series emphasizes the question of how connectionist or neural network models can be made to perform rapid short-term types of computation that are useful in higher-level cognitive processes. The most recent volumes are directed mainly at researchers in connectionism, analogy, metaphor and case-based reasoning but are also suitable for graduate courses in those areas. **Connectionism in a Broad Perspective** Lars F. Niklasson, Mikael B. Bodén, 1994 Covers recent research in connectionism on a range of topics from biology to hardware and from psychology to philosophy. Topics include the mind-body problem, neural networks and computing, cognition and non-linear dynamics, language learning and neurobiology. *The Relationship Between Connectionist Models and a Dynamic Data-oriented Theory of Concept Formation* Renate Bartsch, 1994
