Caracena, 1990 **The Downburst** Tetsuya Théodore Fujita, 1985 *Advanced Structural Wind Engineering* Yukio Tamura, Ahsan Kareem, 2013-07-19 This book serves as a textbook for advanced courses as it introduces state of the art information and the latest research results on diverse problems in the structural wind engineering field The topics include wind climates design wind speed estimation bluff body aerodynamics and applications wind induced building responses wind gust factor approach wind loads on components and cladding debris impacts wind loading codes and standards computational tools and computational fluid dynamics techniques habitability to building vibrations damping in buildings and suppression of wind induced vibrations Graduate students and expert engineers will find the book especially interesting and relevant to their research and work *Advances in Fluid-Structure Interaction* Marianna Braza, Alessandro Bottaro, Mark

Thompson,2016-04-07 This book addresses flow separation within the context of fluid structure interaction phenomena Here new findings from two research communities focusing on fluids and structures are brought together emphasizing the importance of a unified multidisciplinary approach The book covers the theory experimental findings numerical simulations and modeling in fluid dynamics and structural mechanics for both incompressible and compressible separated unsteady flows There is a focus on the morphing of lifting structures in order to increase their aerodynamic and or hydrodynamic performances to control separation and to reduce noise as well as to inspire the design of novel structures The different chapters are based on contributions presented at the ERCOFTAC Symposium on Unsteady Separation in Fluid Structure Interaction held in Mykonos Greece 17 21 June 2013 and include extended discussions and new highlights The book is intended for students researchers and practitioners in the broad field of computational fluid dynamics and computational structural mechanics It aims at supporting them while dealing with practical issues such as developing control strategies for unsteady separation and applying smart materials and biomimetic approaches for design and control Tornado Alley

Howard B. Bluestein,2006 Tornadoes are the most violent magnificent and utterly unpredictable storms on earth reaching estimated wind speeds of 300 mph and leaving swaths of destruction in their wake In Tornado Alley Howard Bluestein draws on two decades of experience chasing and photographing tornadoes across the Plains to present a fascinating historical account of the study of tornadoes and the great thunderstorms that spawn them A century ago tornado warnings were so unreliable that they usually went unreported Today despite cutting edge Doppler radar technology and computer simulation these storms remain remarkably difficult to study Leading scientists still conduct much of their research from the inside of a speeding truck and often contend with jammed cameras flash floods and windshields smashed by hailstones and flying debris Using over a hundred diagrams models and his own spectacular color photographs Bluestein documents the exhilaration of hair raising encounters with as many as nine tornadoes in one day as well as the crushing disappointment of failed expeditions and ruined equipment Most of all he recreates the sense of beauty mystery and power felt by the scientists who risk their lives to study violent storms For scientists amateur weather enthusiasts or anyone who s ever been intrigued or terrified by a darkening sky Tornado Alley provides not only a history of tornado research but a vivid look into the origin and effects of nature s most dramatic phenomena
