The Routledge Handbook of Second Language Acquisition and Language Testing Paula Winke, Tineke Brunfaut, 2020-12-27 This Handbook with 45 chapters written by the world's leading scholars in second language acquisition SLA and language testing dives into the important interface between SLA and language testing shared ground where researchers seek to measure second language performance to better understand how people learn their second languages The Handbook also reviews how to best measure and evaluate the second language L2 learners personal characteristics backgrounds and learning contexts to better understand their L2 learning trajectories Taking a transdisciplinary approach to research the book builds upon recent theorizing and measurement principles from the fields of applied linguistics cognitive science psychology psycholinguistics psychometrics educational measurement and social psychology The Handbook is divided into six key sections 1 Assessment concepts for SLA researchers 2 Building instruments for SLA research 3 Measuring individual differences 4 Measuring language development 5 Testing specific populations and 6 Measurement principles for SLA researchers

Individual Differences in Movement D.B. Kirkcaldy, 2012-12-06 This book is an attempt to bridge the gap between differential psychology and human movement It is curious that each discipline has received considerable attention in its own right but little effort has been made to cross fertilize them Some experimentalists view this union as the equivalent of committing academic adultery they have tended to concentrate on general theories and models of motor control and movement viewing individual differences as awkward and best assigned to the error variance component of an analysis By neglecting person variables valuable information is discarded people do differ in terms of ability attitude motivation and temperament and it is hardly surprising that such differences interact with a variety of experimental and situational paradigms The causes and determinants of individual differences must be examined at an interdisciplinary level incorporating studies from experimental physiological clinical and educational psychology This synthesis could not have been actualized by any single contributor For this reason a multi authored approach has been adopted in which 17 specialists have been assembled to present the current position of individual difference research in their respective disciplines The authors were granted maximum freedom in their selection and presentation of material What emerges is hopefully a novel and informative collection of articles addressed to a wide audience and providing an impulse for further research
