Couch, 2021-04-14 *Pathobiology of Marine and Estuarine Organisms* is a comprehensive up to date review of aquatic animal pathobiology covering infectious and non infectious diseases of vertebrates such as marine mammals and fishes in addition to diseases of invertebrates such as crustacea mollusks and lower phyla The book provides critical information on viral fungal bacterial parasitic and neoplastic diseases of fish and invertebrates Written by top notch experts in the field *Pathobiology of Marine and Estuarine Organisms* emphasizes pollution associated diseases and includes an important review on the effects of pollution on marine mammals The book will be a welcome addition to the libraries of aquatic and marine biologists aquatic toxicologists fisheries biologists aquaculturalists fish and invertebrate pathologists and aquatic animal parasitologists Toxic Substances and Human Risk Robert G. Tardiff, Joseph V. Rodricks, 2013-03-13 As society has become increasingly aware of the potential threats to human health due to exposures to toxic chemicals in the environment and the workplace and in consumer products it has placed increased demands upon the still fledgling science of toxicology As is often the case when science is called upon to supply firm answers when pertinent information and fundamental knowledge are lacking both the scientific and the social issues become confused and new tensions develop One of the major purposes of this book is to focus on those aspects of the science of toxicology that pertain most to social issues namely analysis of risk for purposes of human health protection Although it is apparent that the discipline of toxicology is not yet prepared to provide firm answers to many questions concerning human risk it is important that the rigorously derived information be used in the most objective and logical way to yield the closest approximation to the truth This book is designed to supply as much guidance for such tasks as is permitted by the current state of our knowledge Its emphasis is thus placed on interpretation of toxicity data broadly defined for assessing risks to human health In this way it differs from other basic toxicology texts most of which emphasize methods for performing studies or describe various toxicological endpoints and classes of toxic agents The Future of Predictive Safety Evaluation A.N.

Worden,D.V. Parke,J. Marks,2012-12-06 Reproduction and fetal development in humans and experimental animals may be adversely affected by a wide range of drugs and environmental agents They may be toxic in the parental generation leading to impaired germ cell formation loss of reproductive potential and infertility following chronic exposure Deviant fetal development occurs as a consequence of cellular damage at sensitive stages in development Changes seen range from intrauterine mortality and structural malformation to growth retardation with physiological and behavioural defects Concepts on the mechanism of action of teratogens are discussed with reference to some better known agents Presently regulatory authorities prefer whole animal studies in predictive safety evaluation of substances to which a pregnant woman may be exposed Tests are conducted over one or more generations and are designed to study the influence of test compounds upon general reproductive performance fertility fetal development and perinatal and postnatal behaviour Experiments are designed to permit compounds to be tested under conditions resembling expected human exposure Small rodents and rabbits are preferred species on account of their convenience as laboratory animals and the available knowledge regarding their reproductive behaviour fetal development and known sensitivity to human teratogens
