Specification And Analysis Of Concurrent Systems:

Specification and Analysis of Concurrent Systems Ryszard Janicki, Peter E. Lauer, 2012-12-06 Concurrent systems abound in human experience but their fully adequate conceptualization as yet eludes our most able thinkers The COSY ConcurrentSystem notation and theory was developed in the last decade as one of a number of mathematical approaches for conceptualizing and analyzing concurrent and reactive systems The COSY approach extends the conventional notions of grammar and automaton from formal language and automata theory to collections of synchronized grammars and automata permitting system specification and analysis of true concurrency without reduction to non determinism COSY theory is developed to a great level of detail and constitutes the first uniform and self contained presentation of all results about COSY published in the past as well as including many new results COSY theory is used to analyze a sufficient number of typical problems involving concurrency synchronization and scheduling to allow the reader to apply the techniques presented to similar problems The COSY model is also related to many alternative models of concurrency particularly Petri Nets Communicating Sequential Processes and the Calculus of Communicating Systems

Software Architecture: System Design, Development and Maintenance Jan Bosch,Morven Gentleman,Christine Hofmeister,Juha Kuusela,2013-06-29 For more and more systems software has moved from a peripheral to a central role replacing mechanical parts and hardware and giving the product a competitive edge Consequences of this trend are an increase in the size of software systems the variability in software artifacts and the importance of software in achieving the system level properties Software architecture provides the necessary abstractions for managing the resulting complexity We here introduce the Third Working IEEE/IFIP Conference on Software Architecture WICSA3 That it is already the third such conference is in itself a clear indication that software architecture continues to be an important topic in industrial software

development and in software engineering research However becoming an established field does not mean that software architecture provides less opportunity for innovation and new directions On the contrary one can identify a number of interesting trends within software architecture research The first trend is that the role of the software architecture in all phases of software development is more explicitly recognized Whereas initially software architecture was primarily associated with the architecture design phase we now see that the software architecture is treated explicitly during development product derivation in software product lines at run time and during system evolution Software architecture as an artifact has been decoupled from a particular lifecycle phase
