The Tides of Mind: Uncovering the Spectrum of Consciousness David Gelernter, 2016-02-22 A rock star New York Times of the computing world provides a radical new work on the meaning of human consciousness The holy grail of psychologists and scientists for nearly a century has been to understand and replicate both human thought and the human mind In fact it's what attracted the now legendary computer scientist and AI authority David Gelernter to the discipline in the first place As a student and young researcher in the 1980s Gelernter hoped to build a program with a dial marked focus At maximum focus the program would think rationally formally reasonably As the dial was turned down and focus diminished its mind would start to wander and as you dialed even lower this artificial mind would start to free associate eventually ignoring the user completely as it cruised off into the mental adventures we know as sleep While the program was only a partial success it laid the foundation for **The Tides of Mind** a groundbreaking new exploration of the human psyche that shows us how the very purpose of the mind changes throughout the day Indeed as Gelernter explains when we are at our most alert when reasoning and creating new memories is our main mental business the mind is a computer like machine that keeps emotion on a short leash and attention on our surroundings As we gradually tire however and descend the mental spectrum reasoning comes unglued Memory ranges more freely the mind wanders and daydreams grow more insistent Self awareness fades reflection blinks out and at last we are completely immersed in our own minds With far reaching implications Gelernter's landmark **Spectrum of Consciousness** finally helps decode some of the most mysterious wonders of the human mind such as the numinous light of early childhood why dreams are so often predictive and why sadism and masochism underpin some of our greatest artistic achievements It's a theory that also challenges the very notion of the mind as a machine and not through empirical studies or hard science but by listening to our great poets and novelists who have proven themselves as humanity's most trusted guides to the subjective mind and inner self In the great introspective tradition of Wilhelm Wundt and Ren Descartes David Gelernter promises to not only revolutionize our understanding of what it means to be human but also to help answer many of our most fundamental questions about the origins of creativity thought and consciousness
