Nicholas, 1964 **Kras i speleologia**, 2008 *Encyclopedia of Caves and Karst Science* John Gunn, 2004-08-02 The Encyclopedia of Caves and Karst Science contains 350 alphabetically arranged entries The topics include cave and karst geoscience cave archaeology and human use of caves art in caves hydrology and groundwater cave and karst history and conservation and management The Encyclopedia is extensively illustrated with photographs maps diagrams and tables and has thematic content lists and a comprehensive index to facilitate searching and browsing **A Lexicon of Cave and Karst Terminology with Special Reference to Environmental Karst Hydrology** Malcolm S. Field, 2002 *The Science of Speleology* Trevor D. Ford, Cecil Howard Dunstan Cullingford, 1976 **Current Titles in Speleology**, 1982 **Hypogene Karst Regions and Caves of the World** Alexander Klimchouk, Arthur N. Palmer, Jo De Waele, Augusto S. Auler, Philippe Audra, 2017-08-17 This book illustrates the diversity of hypogene speleogenetic processes and void conduit patterns depending on variations of the geological environments by presenting regional and cave specific case studies The cases include both well known and newly recognized hypogene karst regions and caves of the world They all focus on geological hydrogeological geodynamical and evolutionary contexts of hypogene speleogenesis The last decade has witnessed the boost in recognition of the possibility global occurrence and practical importance of hypogene karstification speleogenesis i e the development of solutional porosity and permeability by upwelling flow independent of recharge from the overlying or immediately adjacent surface Hypogene karst has been identified and documented in many regions where it was previously overlooked or misinterpreted The book enriches the basis for generalization and categorization of hypogene karst and thus improves our ability to adequately model hypogene karstification and predict related porosity and permeability It is a book which benefits every researcher student and practitioner dealing with karst History of Cave Science Trevor R. Shaw, 1992 This book is mainly concerned with the geomorphological aspects of caves karst hydrology speleogenesis and the origin of speleothems Cave exploration was a necessary prerequisite for such studies and its progress is traced from prehistoric times to the systematic regional investigations of the 17th century and later The first extensive work was in Slovenia stimulated by the practical importance there of karst hydrology for water supply and flood control Large karst springs had long attracted attention and several hypotheses had already been advanced according to some they were supplied by water raised from the sea others explained them by condensation and finally their source as rainfall was accepted The study of intermittent karst lakes led eventually to the postulation of what amounted to a water table A true understanding of speleogenesis and the origin of speleothems depended on a knowledge of the chemistry of limestone solution which in its turn depended on the rejection of phlogiston at the end of the 18th century Before that time only mechanical erosion was normally conceived as a means of

removing particles of solid rock and subsequently redepositing them to form speleothems although a few people earlier in the century had involved an unspecified aerial acid There were also several more primitive theories including the formation of caves by tectonic catastrophes by erosion as the water of Noah's Flood drained back underground and the inflation of cavities in still soft limestone by decomposition gases For many years speleothems were thought to possess a low form of life growinglike plants rather than by accretion After the action of carbon dioxide in speleogenesis was appreciated a new question arose whether caves could be formed in the saturated zone or whether they were due solely to vadose water For many years the problem was not recognised but violent controversy was taking place over it by the end of the 19th century

Advances in Karst Research M. Parise, F. Gabrovsek, G. Kaufmann, N. Ravbar, 2018-06-18 This volume covers major advances in the study of the geomorphology hydrology engineering geology and management of these specialized and fragile environments The book will be valuable for geologists engineers and geophysicists interested in karst along with land planners developers and managers of show caves natural parks and reserves in karst areas [Library of Congress Catalogs](#) Library of Congress, 1980
