Psychotherapy This fascinating thorough and enjoyable book is not only readable but is technically valuable. It contains a vast amount of thought provoking material which I consider to be an invaluable resource for health care professionals from diverse orientations who work directly or indirectly with people struggling to manoeuvre in therapy and to develop the self. Liz Gordon *The Journal of Critical Psychology Counselling and Psychotherapy*. In a nutshell this elegantly written book contains a wealth of useful professional experience for readers to draw on, a liberal sprinkling of diagrams and tables which helps to make it a useful teaching tool and an interesting list of references. Jo King *Clinical Psychology Counsellors and psychotherapists* often encounter difficult situations with clients for which they feel ill prepared. At any stage in the process a client may experience a crisis or setback in their progress or simply be unable to move beyond a certain point. *Working Through Setbacks in Psychotherapy* is therefore intended to help therapists respond to such events which form major obstacles to the successful development and maintenance of the therapeutic relationship. The authors present a framework for understanding the problems that arise and offer effective guidance for working through difficult situations which test the skills of even the most experienced practitioners. Until now little has been written about the setbacks which can and frequently do occur in the therapeutic process and this book will no doubt be a welcome and accessible addition to the literature for practising and trainee counsellors and psychotherapists and those who supervise them. **Suicidal Behavior**

Richard McKeon, 2022-04-11 A new edition with the latest approaches to assessment and treatment of suicidal behavior. With more than 800 000 deaths worldwide each year, suicide is one of the leading causes of death. The second edition of this volume incorporates the latest research showing which empirically supported approaches to assessment, management and treatment really help those at risk. Updates include comprehensively updated epidemiological data, the role of opioid use, problems, personality disorders and trauma play in suicide, new models explaining the development of suicidal ideation and the zero suicide model. This book aims to increase clinicians' access to empirically supported interventions for suicidal behavior with the hope that these methods will become the standard in clinical practice. The book is invaluable as a compact how-to reference for clinicians in their daily work and as an educational resource for students and for practice oriented continuing education. Its reader friendly structure makes liberal use of tables, boxed clinical examples and clinical vignettes. The book which also addresses common obstacles in treating individuals at risk for suicide is an essential resource for anyone working with this high risk population.
