Suicide: A Global Perspective Maurizio Pompili, 2012-09-19 In the year 2000 approximately one million people died from suicide a global mortality rate of 16 per 100 000 or one death every 40 seconds In the last 45 years suicide rates have increased by 60% worldwide Suicide is now among the three leading causes of death among those aged 15 44 years both sexes these figures do not include suicide attempts up to 20 times more frequent than completed suicide Suicide worldwide is estimated to represent 1.8% of the total global burden of disease in 1998 and 2.4% in countries with market and former socialist economies in 2020 Although traditionally suicide rates have been highest among the male elderly rates among young people have been increasing to such an extent that they are now the group at highest risk in a third of countries in both developed and developing countries Mental disorders particularly depression and substance abuse are associated with more than 90% of all cases of suicide however suicide results from many complex sociocultural factors and is more likely to occur particularly during periods of socioeconomic family and individual crisis situations e.g. loss of a loved one employment honour The economic costs associated with completed and attempted suicide are estimated to be in the billions of dollars One million lives lost each year are more than those lost from wars and murder annually in the world It is three times the catastrophic loss of life in the tsunami disaster in Asia in 2005 Every day of the year the number of suicides is equivalent to the number of lives lost in the attack on the World Trade Center Twin Towers on 9/11 in 2001 Everyone should be aware of the warning signs for suicide Someone threatening to hurt or kill him/herself or taking of wanting to hurt or kill him/herself someone looking for ways to kill him/herself by seeking access to firearms available pills or other means someone talking or writing about death dying or suicide when these actions are out of the ordinary for the person Also high risk of suicide is generally associated with hopelessness rage uncontrolled anger seeking

revenge acting reckless or engaging in risky activities seemingly without thinking feeling trapped like there s no way out increased alcohol or drug use withdrawing from friends family and society anxiety agitation unable to sleep or sleeping all the time dramatic mood changes no reason for living no sense of purpose in life Table 1 Understanding and helping the suicidal individual should be a task for all Suicide Myths How to Help the Suicidal Person Warning Signs of Suicide Myth Suicidal people just want to die Fact Most of the time suicidal people are torn between wanting to die and wanting to live Most suicidal individuals don t want death they just want to stoop the great psychological or emotional pain they are experiencing Listen Accept the person s feelings as they are Do not be afraid to talk about suicide directly Ask them if they developed a plan of suicide Expressing suicidal feelings or bringing up the topic of suicide Giving away prized possessions settling affairs making out a will Signs of depression loss of pleasure sad mood alterations in sleeping eating patterns feelings of hopelessness Myth People who commit suicide do not warn others Fact Eight out of every 10 people who kill themselves give definite clues to their intentions They leave numerous clues and warnings to others although clues may be non verbal or difficult to detect Remove lethal means for suicide from person s home Remind the person that depressed feelings do change with time Point out when death is chosen it is irreversible Change of behavior poor work or school performance Risk taking behaviors Increased use of alcohol or drugs Social isolation Developing a specific plan for suicide Myth People who talk about suicide are only trying to get attention They won t really do it Fact Few commit suicide without first letting someone know how they feel Those who are considering suicide give clues and warnings as a cry for help Over 70% who do threaten to commit suicide either make an attempt or complete the act Express your concern for the person Develop a plan for help with the person Seek outside emergency intervention at a hospital mental health clinic or call a suicide prevention center Myth Don t mention suicide to someone who s showing signs of depression It will plant the idea in their minds and they will act on it Fact Many depressed people have already considered suicide as an option Discussing it openly helps the suicidal person sort through the problems and generally provides a sense of relief and understanding Suicide is preventable Most suicidal individuals desperately want to live they are just unable to see alternatives to their problems Most suicidal individuals give definite warnings of their suicidal intentions but others are either unaware of the significance of these warnings or do not know how to respond to them Talking about suicide does not cause someone to be suicidal on the contrary the individual feel relief and has the opportunity to experience an empathic contact Suicide profoundly affects individuals families workplaces neighbourhoods and societies The economic costs associated with suicide and self inflicted injuries are estimated to be in the billions of dollars Surviving family members not only suffer the trauma of losing a loved one to suicide and may themselves be at higher risk for suicide and emotional problems Mental pain is the basic ingredient of suicide Edwin Shneidman calls such pain psychache 1 meaning an ache in the psyche Shneidman suggested that the key questions to ask a suicidal person are Where do you hurt and How may I help you If the function of

suicide is to put a stop to an unbearable flow of painful consciousness then it follows that the clinician's main task is to mollify that pain Shneidman 1 also pointed out that the main sources of psychological pain such as shame guilt rage loneliness hopelessness and so forth stem from frustrated or thwarted psychological needs These psychological needs include the need for achievement for affiliation for autonomy for counteraction for exhibition for nurturance for order and for understanding Shneidman 2 who is considered the father of suicidology has proposed the following definition of suicide Currently in the Western world suicide is a conscious act of self induced annihilation best understood as a multidimensional malaise in a needful individual who defines an issue for which the suicide is perceived as the best solution Shneidman has also suggested that that suicide is best understood not so much as a movement toward death as it is a movement away from something and that something is always the same intolerable emotion unendurable pain or unacceptable anguish Strategies involving restriction of access to common methods of suicide have proved to be effective in reducing suicide rates however there is a need to adopt multi sectoral approaches involving other levels of intervention and activities such as crisis centers There is compelling evidence indicating that adequate prevention and treatment of depression alcohol and substance abuse can reduce suicide rates School based interventions involving crisis management self esteem enhancement and the development of coping skills and healthy decision making have been demonstrated to reduce the risk of suicide among the youth Worldwide the prevention of suicide has not been adequately addressed due to basically a lack of awareness of suicide as a major problem and the taboo in many societies to discuss openly about it In fact only a few countries have included prevention of suicide among their priorities Reliability of suicide certification and reporting is an issue in great need of improvement It is clear that suicide prevention requires intervention also from outside the health sector and calls for an innovative comprehensive multi sectoral approach including both health and non health sectors e g education labour police justice religion law politics the media

The influence of physical environmental social psychological cultural and economic forces on late life relationships and connectedness will be explored by an international roster of researchers and practice scholars. The perspectives of theorists educators administrators public health officials clinicians and program planners will all be included to ensure arriving at a more nuanced appreciation of what has been proclaimed as one of the greatest public health challenges of our day. Arriving at a greater understanding of the conditions that put elders at risk of becoming socially isolated and lonely the extent to which it should be considered both a personal community and societal threat the impact of COVID 19 those at greatest risk its negative consequences and steps that can be taken to prevent reduce and reverse its occurrence. Ultimately this Research Topic intends to help readers more thoroughly understand the underlying causes as well as effective programmatic strategies for bolstering older adult social and emotional health and community engagement across diverse cultures social systems and cohorts. This Research Topic will represent

some of the most current theoretical programmatic and clinical research from around the world inquiring into the growing fragility of late life relationships and the accompanying feelings of disengagement. From multiple disciplinary and professional perspectives this Research Topic will serve to document our current understanding of the complexities surrounding the negative impacts of weakened relational ties on older adult safety, health, and well-being. Additionally, it will showcase some of the most promising programs and interventive techniques that show the greatest promise in helping to repair and maintain the integrity of an older adult's social and community network and support system. Submission topics may include but are not limited to: theoretical frameworks and conceptual models of social isolation and loneliness in older adults; epidemiological and prevalence analyses of social isolation and loneliness among diverse populations of older adults; the emotional, behavioural, physical, environmental, and social determinants that contribute to the risk for and prevalence of elder isolation and/or loneliness; impacts of social isolation and loneliness on older adult health, safety, cognition, life satisfaction, and well-being; innovative programs and interventions aimed at preventing and/or reducing social isolation and loneliness; multidisciplinary approaches to addressing social isolation and loneliness in older adult populations; policy and community-based initiatives to promote social connectedness and engagement; the influence of the COVID-19 pandemic on elder isolation and loneliness; technological advancements and their role in potentially increasing and conversely mitigating social isolation and loneliness among older adults.

Handbook of Race-Ethnicity and Gender in Psychology Marie L. Miville, Angela D. Ferguson, 2014-02-06. Multicultural aspects of psychology have received some attention in the literature in the last decade. A number of texts currently address these significant concerns, for example: *Counseling the Culturally Different* Sue, *Handbook of Multicultural Counseling* Poterotto et al 2009, and *Handbook of Multicultural Counseling Competencies* Pope Davis Coleman 2005. In their most recent editions, several of these books address more nuanced complexities of diversity, for example, the intersections of gender or social class with race/ethnicity. Meanwhile, other texts have addressed gender issues in psychology: *Handbook of Counseling Women*, *Counseling Men*, with some attention paid to racial/ethnic and other diversity concerns. Clearly, the progression of scholarship in this field reflects the importance of incorporating multiple aspects of diversity within psychology. However, no book currently exists that fully addresses the complexities of race/ethnicity and gender together. Better understanding of the dual impact of race/ethnicity and gender on psychological functioning may lead to more effective conceptualizations of a number of mental health issues such as domestic violence, addictions, health-related behaviors, and achievement. Exploring the impact of race/ethnicity and gender also may provide a broader understanding of self in community as this affects individuals, families, and other social groups, and work and career development. Topics of interest may include identity development, worldviews, and belief systems; parenting styles; interventions for promoting resilience and persistence; and strategies for enhancing more accurate diagnostic and treatment modalities. Today's world is comprised of multiple and intersecting communities that remain in need of psychological models.

and interventions that support and promote both individual and collective mental health We believe that utilizing unidimensional conceptual models e g focusing solely on race ethnicity or gender no longer adequately addresses psychological concerns that are dynamic complex and multi faceted The proposed Handbook will focus on timely topics which historically have been under addressed for a number of diverse populations
