Suicide Gene Therapy:

Suicide Gene Therapy Caroline J. Springer, 2008-02-01 Gene therapy has expanded rapidly over the last decade The number of clinical trials reported by 2001 included 532 protocols and 3436 patients Phase I trials predominate with 359 trials of 1774 patients versus Phase II 57 trials with 507 patients and Phase III 3 trials of 251 patients The disease overwhelmingly targeted by gene therapy is cancer involving 331 trials with 2361 patients Despite the somewhat disappointing results of clinical trials to date gene therapy offers tremendous promise for the future of cancer therapy The area of gene therapy is vast and both malignant and nonmalignant cells can be targeted Suicide Gene Therapy Methods and Reviews covers gene therapy that targets malignant cells in a treatment that has become known as suicide gene therapy Basically this approach uses the transduction of cancer cells with a gene for a foreign enzyme that when expressed is able to activate a nontoxic prodrug into a highly cytotoxic drug able to kill the cancer cell population This is a major area in cancer gene therapy in 2001 this technique was represented by 52 clinical protocols with a total of 567 patients Additional trials used multiple gene therapy protocols that also involved suicide gene therapy 83 with 497 patients indicating that the interest in this area is considerable Suicide Gene Therapy Methods and Reviews aims to cover comprehensively both in theoretical and practical terms the rapidly evolving area of suicide gene therapy for cancer *Suicide Gene Therapy* Nejat Düzgüneş, 2018-12-12 This detailed volume explores the methods used for most of the recent approaches to suicide gene therapy of cancer which exploits promoters that are specific to cancer cells thereby ensuring or greatly increasing the likelihood that the therapeutic gene is expressed only in cancer cells The book also contains chapters describing methods to improve the safety of cell therapy and techniques utilizing bone marrow mesenchymal cells Written for the highly successful Methods in Molecular Biology series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and practical Suicide Gene Therapy Methods and Protocols serves as an ideal guide for researchers expanding upon our knowledge and application of this vital form of cancer therapy Applications of Suicide Gene Therapy for the Treatment of Colorectal Metastases Ian Michael Pope, 2002 **Therapeutic Applications Of Suicide Gene Therapy** Scott M. K. Jain,Kewal K. Jain,2000-04-14 This special report on Gene Therapy Companies by K K Jain provides an up to date overview of the gene therapy industry It contains a wealth of very practical information on 105 companies For each company information is available on the people to contact their contact details a corporate history the company s technologies and products financial data patents held products in clinical trials collaborations with other companies and selected publications from the company s scientists Almost 200 companies were initially considered for inclusion but just over 100 companies were finally selected as they fulfilled the necessary criteria to be classified as a Gene Therapy Company defined broadly to include cell therapy companies Not all of the companies devote their activity exclusively to gene therapy but they have sufficient relevance to be included As part of this project new companies were discovered that have not been reported in other publications or on the internet Dr Jain has spared no effort to ensure that the information is up to date and accurate at the time of publishing In most instances the information was reviewed by the companies to correct any outdated information or to add any complementary or recent information In addition to the detailed descriptions of each company the data is also presented in summary tabular form so that at a glance the reader can identify collaborations within the gene therapy industry or determine which companies are pursuing strategies involving viral non viral or other approaches to gene therapy and which diseases are being targetted Given that much of the gene therapy research and development is currently being carried out within the industrial sector it is important for scientists managers and investors to have the relevant information at their fingertips This special report provides that information in one accurate easy to consult and up to date source *Gene Therapy* Nancy Smyth Templeton,D. Transcriptional Targeting of Suicide Genes in Cancer Gene Therapy ,1999 **Dynamic Suicide Gene Therapy Control** LaMont Cannon,2010 Based on the recent dynamic gene therapy proposed by Martinez Quintanilla et al we have developed a set of ordinary differential equations to model the dynamics of various cancerous cells during tumor growth and treatment We then exploited the dependence of certain parameters within the system during therapy to devise an optimal control method for treatment Employing the use of an optimal controller allows us to analyze the best possible outcome of the treatment under several conditions In this thesis we will apply an optimal controller to the system under various conditions

taking specific note of the total tumor burden as a result of the treatment and total treatment time We will then prove that an optimal control approach is very helpful and may even be necessary for successful implementation of this novel cancer therapy
